

Shirpur Education Society's

R. C. Patel Institute of Technology, Shirpur

An Autonomous Institute

Affiliated to DBATU, Lonere (M.S.),

Approved by AICTE, New Delhi and Govt. of Maharashtra

(DTE: EN - 5172)

Accredited by NAAC 'A' Grade, Bangalore.

Course Curriculum Structure

Electronics & Telecommunication Engineering

Third Year B. Tech

Batch: 2024-2028

With effect from Year 2026-27

(RCP23 NEP Scheme: Revision 1)

Shahada Road, Near Nimzari Naka, Shirpur, Maharashtra 425405

www.rcpit.ac.in

Semester-V-NEP (w.e.f. Academic Year 2026-27)

	Sem-V
Digital Signal Processing (RCP23EPC301)	
Digital Signal Processing Laboratory (RCP23EPC301L)	

Pre-requisite:

- Signals and Systems
- Engineering Mathematics-III

Course Objectives:

- To develop a thorough understanding of DFT and FFT and their applications.
- To teach the design techniques and performance analysis of digital filters.
- To introduce the students to digital signal processors and its applications.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Implement DFT and FFT algorithms in finding the response of the system.	L4	Analyze
CO2	Design different types of IIR filters.	L6	Create
CO3	Design different types of FIR filters.	L6	Create
CO4	Evaluate the effects of Poles and Zeros in design of digital filters.	L5	Evaluate

Digital Signal Processing (RCP23EPC301)

COURSE CONTENTS

Unit-I	Discrete Fourier Transform & Fast Fourier Transform	10 Hrs.
---------------	--	----------------

Definition and Properties of DFT, IDFT, Linear and Circular convolution of sequences using DFT and IDFT. Filtering of long data sequences: Overlap-Save and Overlap-Add Method for computation of DFT, Frequency Analysis of Signals Using the DFT, Fast Fourier Transforms (FFT), Radix-2 decimation in time and decimation in frequency FFT algorithms, inverse FFT, Composite Radix FFT $N=2^3$, $N=3^2$.

Unit-II	Analysis of Linear Time Invariant System	8 Hrs.
----------------	---	---------------

Ideal Filter Characteristics, Position of Poles and Zeros for Low Pass, High Pass, Band Pass, Band Stop, All pass filters, Effect of Poles and Zeros on the Frequency Response, Digital Resonators, Notch Filters, Comb Filters, All-Pass Filters, Digital Sinusoidal Oscillators, Minimum-Phase, Maximum-Phase, and Mixed-Phase Systems

Unit-III	FIR Digital Filters and realization	8 Hrs.
-----------------	--	---------------

Characteristics of FIR digital filters, Design of Symmetric and Antisymmetric FIR Filters (Type 1 to Type 4) and its realization, Design of Linear Phase FIR filters using Window techniques (Rectangular, Bartlett, Hamming, Hanning, Blackman), Design of Linear Phase FIR filters using Frequency Sampling technique. FIR filter realization: Direct Form, Cascade and frequency sampling realization.

Unit-IV	IIR Digital Filters and realization	10 Hrs.
----------------	--	----------------

Mapping of S-plane to Z-plane using impulse invariance method (IIM) and bilinear transformation method (BLT), Conversion of analog filter to digital filter, Analog filter approximations: Butterworth, Chebyshev I, Types of IIR filter (Butterworth, Chebyshev-I, Chebyshev-II, Elliptical), Design of IIR digital filters (Butterworth and Chebyshev-I), Frequency Transformations, Compare FIR and IIR filter, IIR filter realization: Direct Form, Cascade and Parallel Form.

Unit-V	Finite word length effect on FIR and IIR filter performance	6 Hrs.
---------------	--	---------------

Errors Resulting from Rounding and Truncation, Analysis of Sensitivity to Quantization of Filter Coefficients, Quantization of Coefficients in FIR Filters, Output noise power from a digital system, Product quantization, Noise model for direct form and cascaded IIR structure (first order), Coefficient quantization error and zero input limit cycle, Limit-Cycle Oscillations in Recursive Systems, Scaling to Prevent Overflow

Digital Signal Processing Laboratory (RCP23EPC301L)

List of Laboratory Experiments: (Any Eight)

1. To determine linear and circular convolution using DFT/FFT.
2. To perform Overlap-Add/Overlap-Save methods for long data sequence using DFT/FFT.
3. To find the effect of poles and zeros on FIR/IIR filters (Frequency response).
4. To design linear phase filters and plot magnitude and phase responses.
5. To Design a FIR filter by window method.
6. To Design a FIR filter by frequency sampling method
7. To design Butterworth and Chebyshev-I IIR filters.
8. To perform basic signal processing operations with DSP processor (fixed point/Floating point).
9. To Generate elementary signal (Sine/Cosine) and find its frequency response using DSP processor (fixed point/Floating point).
10. To implement a system for Real time signal filtering by DSP Processor.
11. To design a FIR/IIR filter to remove a noise (sine wave with a given frequency) corrupting ECG/Speech signal.
12. To measure the effect of finite word length on FIR/IIR filter performance.
13. To realize FIR and IIR Filters using Direct Form, Cascade/Parallel form structures.
14. To simulate a system for signal analysis or synthesis.
15. To implement a discrete time system for signal processing using DSP Processor.

Minimum Eight experiments from the above suggested list or any other experiment based on syllabus to be included, which would help the learner to apply the concept learnt

Program: Electronics and Telecommunication Engineering	T.Y.B. Tech
	Sem-V
Wave Theory & Radio Frequency Design (RCP23EPC302)	
Wave Theory & Radio Frequency Design Laboratory (RCP23EPC302L)	

Prerequisite:

- Mathematics for Telecommunication Engineering
- Electrical Network.

Course Objectives:

- To learn concept of static and time varying electromagnetic fields.
- To solve problems related to EM fields using Vectors and Partial differential equations.
- To learn Electromagnetic radiation and propagation in space and within transmission lines.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Compute electric and magnetic fields for symmetrical charge and current configurations using basic static and time varying principles of electromagnetics.	L3	Apply
CO2	Explain the basic concept of S matrix and ABCD matrix in network analysis.	L2	Understand
CO3	Explain the behaviour of Inductor, Capacitor and Resistor at high frequency	L2	Understand
CO4	Calculate various parameters of transmission line analytically and using Smith Chart.	L4	Analyze
CO5	Develop passive RF filter configurations for given specifications.	L5	Evaluate

Wave Theory & Radio Frequency Design (RCP23EPC302)

COURSE CONTENTS

Unit-I	Electrostatics and Magnetostatics	8 Hrs.
---------------	--	---------------

Electrostatics: Coulomb's Law, Gauss's Law and its applications, Electric Potential, Relationship between E and V, Electric Dipole and flux lines, Convection and Conduction Currents, Electric Boundary Conditions, Poisson's and Laplace's Equations, Uniqueness Theorem, General Procedure for solving Poisson's or Laplace's Equations.

Magnetostatics: Biot-Savart's Law, Ampere's Circuital Law and its applications, Magnetic Flux density, Maxwell's equations for Static Fields, Magnetic Scalar and Vector potentials, Magnetic boundary conditions.

Unit-II	Time varying Fields	8 Hrs.
----------------	----------------------------	---------------

Time varying Fields: Faraday's Law, Transformer and Motional Electromotive Forces, Displacement Current Maxwell's equations in point form and integral form, Boundary conditions for time varying field, magnetic vector potential, Time harmonic fields.

Electromagnetic Wave Propagation: Derivation of Wave equation and its solution, Wave Propagation in lossy dielectrics, Plane waves in loss less dielectrics, free space and good conductors, Power and Poynting Vector, Reflection of a Plane wave at normal incidence and oblique incidence.

Unit-III	Single and Multiport Networks	6 Hrs.
-----------------	--------------------------------------	---------------

Single and Multiport Networks: Basic Definitions, Interconnecting Networks, Series Connection of Networks, Parallel Connection of Networks, Cascading Networks.

The Scattering Matrix, Reciprocal Networks and Lossless Networks, A Shift in Reference Planes, Power Waves and Generalized Scattering Parameters, Practical Measurements of S-Parameters.

The Transmission (ABCD) Matrix, Relation to Impedance Matrix and Scattering Matrix.

Unit-IV	Radio Frequency Design	5 Hrs.
----------------	-------------------------------	---------------

Importance of Radio Frequency Design: RF behaviour of Passive Components High-Frequency Resistors, High-Frequency Capacitors, High-Frequency Inductors.

Unit-V	Transmission Lines	7 Hrs.
---------------	---------------------------	---------------

Transmission Lines: Parameters, Transmission line equations, Input impedance, reflection coefficient, Standing wave ratio.

Smith Chart: From Reflection Coefficient to Load Impedance

Reflection coefficient in Phasor Form, Normalised Impedance Equation, Parametric Reflection Coefficient Equation, Graphical Representation.

Impedance Transformation: Impedance Transformation for General Load, Standing Wave Ratio, Special Transformation Conditions.

Unit-VI

RF Filter Design

8 Hrs.

RF Filter Design: Basic Resonator and Filter configurations

Filter Types and Parameters, Low-Pass Filter, High-Pass Filter, Bandpass and Band stop Filters, Insertion Loss.

Filter Design by the Image Parameter Method: Image Impedances and Transfer Functions for Two-Port Networks, Constant-k Filter sections, m-derived Filter Sections, Composite Filters.

Special Filter Realizations using Insertion Loss Method: Butterworth-Type Filters, Chebyshev-Type Filters, Denormalization of Standard Low-Pass Design.

Filter Implementation: Unit Elements, Kuroda's Identities, Microstrip Filter Design.

Wave Theory & Radio Frequency Design Laboratory (RCP23EPC302L)

List of Laboratory Experiments :(Any 8)

1. Numericals on Electrostatics & Electric Boundary conditions
2. Numericals on Magnetostatics
3. Numericals on Time varying fields and Maxwell Equations
4. Numericals on Wave Propagation in different material
5. Numericals on network parameters and properties
6. Characterization of R/L/C at high frequency
7. Transmission line impedance calculations Analytical and Smith chart
8. Transmission line reflection coefficient calculations Analytical and Smith chart
9. Filter Design by the Image Parameter Method
10. Filter Design by the Insertion Loss Method

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Program: Electronics and Telecommunication Engineering	T.Y.B. Tech
	Sem-V
Analog and Digital Communication (RCP23EPC303)	
Analog and Digital Communication Laboratory (RCP23EPC303L)	

Pre-requisite:

- Signals and Systems

Course Objectives:

- To learn various Analog and Digital Communication Systems.
- To equip students with the knowledge and skills to design, analyse, and implement efficient source and error coding techniques for data compression, error detection, and correction, enabling reliable and optimized communication across various digital systems.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Analyze Analog Communication techniques and reception	L4	Analyze
CO2	Describe pulse communication and pulse code modulation systems	L2	Understand
CO3	Demonstrate and compare various digital modulation techniques	L3	Apply
CO4	Design and implement source and error control coding scheme.	L5	Evaluate

Analog and Digital Communication (RCP23EPC303)

COURSE CONTENTS

Unit-I	Analog Communication systems and reception	10 Hrs.
---------------	---	----------------

Introduction to communication system, Amplitude modulation: Introduction, Mathematical Analysis, Square Law Modulator, Envelope Detector, Frequency modulation: Introduction, Mathematical Analysis, Reactance Modulator, Foster-Seeley Discriminator, Pre-emphasis and de-emphasis, narrow & wideband FM. Radio receivers characteristics, TRF and super-Heterodyne receiver.

Unit-II	Pulse-Modulation Techniques	08 Hrs.
----------------	------------------------------------	----------------

Types of Pulse modulation- PAM, PWM and PPM. PCM Generation and Reconstruction, Noise in PCM, Quantization and Companding, DPCM, DM.

Unit-III	Baseband Transmission and Optimal Reception of Digital Signal	08 Hrs.
-----------------	--	----------------

Discrete PAM signals and power spectra of NRZ unipolar and bipolar signals, Inter-symbol interference (ISI), Eye Diagram, Optimum Receiver.

Unit-IV	Digital Modulation Techniques	12 Hrs.
----------------	--------------------------------------	----------------

Generation, power spectral density, detection, signal space diagram, Euclidian distance, bandwidth, spectral efficiency of: Binary Phase Shift Keying (BPSK), Quaternary Phase Shift Keying (QPSK), M-ary PSK Modulation, Binary Amplitude Shift Keying (BASK), Quadrature Amplitude Modulation (QAM), Binary Frequency Shift Keying (BFSK), Probability of error analysis of BPSK, QPSK, BFSK, QAM.

Unit-V	Source and error control coding	08 Hrs.
---------------	--	----------------

Measure of Information, Entropy, Mutual Information, Shannon's Theorem, Shannon-Hartley Theorem, Shannon Fano Coding, Huffman Coding, Error Control Coding, Linear Block Codes, Cyclic Codes.

Analog and Digital Communication Laboratory (RCP23EPC303L)

List of Laboratory Experiments: (Any 8)

1. Study of Amplitude Modulation.
2. Study of Double Side Band Suppressed Carrier and Single Side Band Amplitude Modulation.
3. Simulate of AM system and generate time and frequency domain output.
4. To study different types of frequency modulators and Demodulators.
5. Simulate Frequency Modulation system and generate time and frequency domain output.
6. Implement Pre-emphasis and De-emphasis circuit required for FM and analyze the output.
7. Study of Natural Sampling and its reconstruction.
8. Study of Flat top sampling and its reconstruction.
9. Study of Pulse Amplitude Modulation.
10. Study of Pulse Width Modulation.
11. Study of Pulse Position Modulation.
12. Study of PAM-TDM system.
13. Entropy and Mutual Information.
14. Source Coding Algorithms (Huffman coding)
15. Linear block codes (Error detection and correction)
16. Cyclic codes (comparison of performance of coded and un-coded system)
17. ASK, FSK and PSK
18. Generation and Detection of Binary Amplitude Shift Keying (BASK)
19. Generation of Binary FSK signal modulation (FSK)
20. Application of error control codes

Program: Electronics and Telecommunication Engineering	T.Y.B. Tech
	Sem-V
Radar Engineering (RCP23EPE311)	
Radar Engineering Laboratory (RCP23EPE311L)	

Pre-requisite:

- Electromagnetic Field Theory
- Analog Communication

Course Objectives:

- To interpret Radar equations
- To understand various types of Radar.
- To identify various devices used in Radar transmitter and receiver.
- To design Radar transmitter and receiver for given conditions.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain generalized concepts of radar and its applications.	L2	Understand
CO2	Analyze radar range equations in various conditions.	L4	Analyze
CO3	Describe different types of radar for specific application.	L2	Understand
CO4	Explain concept of tracking radar.	L2	Understand
CO5	Evaluate the design constraints for transmitter and receiver	L5	Evaluate

Radar Engineering (RCP23EPE301)

COURSE CONTENTS

Unit-I	Introduction to Radar	8 Hrs.
---------------	------------------------------	---------------

Basic Radar, Radar range equation. Block Diagram, Radar Frequencies. Applications of Radar.

Unit-II	Radar Range Equation	8 Hrs.
----------------	-----------------------------	---------------

Detection of signal in noise. Receiver Noise and Signal-to-noise Ratio. Probability of detection and false alarm: Simple, complex Targets. Pulse Repetition Frequency.

Unit-III	MTI and Pulse Doppler Radar	10 Hrs.
-----------------	------------------------------------	----------------

Introduction to Doppler and MTI radar, Doppler frequency shift. Simple CW Doppler radar, MTI radar block diagram. Delay line canceler. Moving-target-detection. Pulse Doppler radar.

Unit-IV	Tracking Radar	8 Hrs.
----------------	-----------------------	---------------

Mono pulse tracking. Conical scan and sequential lobbing. Limitation of tracking accuracy. Low angle tracking.

Unit-V	Radar Transmitter and Receiver	8 Hrs.
---------------	---------------------------------------	---------------

Radar RF power sources: Klystron, Travelling wave tube, Magnetron, Low power transmitter, high power transmitter, Advantages of solid-state RF power source, Duplexer, and Mixer and their types, Receiver noise figure, Radar Display: Types of displays.

Radar Engineering Laboratory (RCP23EPE301L)

List of Laboratory Experiments: (Any Eight)

1. To study basic Radar and range equation.
2. To Study CW Radar and find the relative speed of the object.
3. Derive Radar range equation with noise figure and find the distance.
4. To study MTI Radar and find the blind speed.
5. Calculate pulse repetition frequency and velocity of the moving object.
6. To study various displays used in Radar systems.
7. To study clutters and its effects on Radar range equation.
8. To study delay line canceller.
9. Find the speed of the fan using Doppler Radar.
10. To study duplexer and mixer.
11. To study tracking Radar.

Minimum eight experiments from the above suggested list or any other experiment based on syllabus to be included, which would help the learner to apply the concept learnt.

Text Books

1. Merrill Skolnik, Introduction to Radar Systems, 2nd Edn, Tata McGraw Hill.

3. William L Melvin, James A Scheer, "Principles of Modern Radar", SciTech Publishing, 1st Edition, 2014.
4. Bassem R. Mahafza, "Radar Signal Analysis", CRC press, 1st Edition, 2021.

Program: Electronics and Telecommunication Engineering	T.Y.B. Tech
	Sem-V
Computer Organization and Architecture (RCP23EPE312)	
Computer Organization and Architecture Laboratory (RCP23EPE312L)	

Pre-requisite:

- Digital System Design

Course Objectives:

- To conceptualize the basics of organizational and architectural issues of a digital Computer
- To analyse performance issues in processor and memory design of a digital Computer.
- To understand various data transfer techniques in digital computer
- To analyse processor performance improvement using instruction level parallelism

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the basic concepts and structure of computers and functionality of the central processing unit.	L2	Understand
CO2	Implement computer arithmetic operations.	L3	Apply
CO3	Describe the basics of instruction sets and their impact on programming.	L2	Understand
CO4	Explain the concepts of memory and I/O organization.	L2	Understand

Computer Organization and Architecture (RCP23EPE302)

COURSE CONTENTS

Unit-I	Introduction of Computer Organization and Architecture	4 Hrs.
---------------	---	---------------

Basic organization of computer, Evolution of Computers, Von Neumann model. Performance measure of Computer Architecture. The Evolution of the Intel 8086 Architecture, Embedded Systems and the ARM.

Unit-II	Data Representation and Arithmetic Algorithms	8 Hrs.
----------------	--	---------------

Number representation: Binary Data representation, two's complement representation and Floating-point representation. Integer Data arithmetic: Addition, Subtraction. Multiplication: Unsigned Signed multiplication- Add Shift Method, Booth's algorithm. Division of integers: Restoring and non-restoring division, signed division, Basics of floating-point representation IEEE 754 floating point (Single double precision) number representation. Floating point arithmetic: Addition, subtraction.

Unit-III	Control Unit	6 Hrs.
-----------------	---------------------	---------------

Soft wired (Micro programmed) and hardwired control unit design methods. Microinstruction sequencing and execution. Micro operations. Introduction to RISC and CISC architectures and design issues. Introduction to Concepts of multiprocessors.

Unit-IV	Instruction Sets: Characteristics and Functions	12 Hrs.
----------------	--	----------------

Machine Instruction Characteristics, Types of Operands, Intel 8086 and ARM Data Types, Types of Operations, Intel 8086 and ARM Operation Types. Instruction Sets: Addressing Modes and Formats: Addressing, 8086 and ARM Addressing Modes, Instruction Formats, 8086 and ARM Instruction Formats, Assembly Language, Instruction cycle, Instruction Pipelining, For 8086, The ARM Processor Instruction-Level Parallelism and Superscalar Processors: Design Issues, Flynn's classifications, Pipeline processing.

Unit-V	Memory Organization	8 Hrs.
---------------	----------------------------	---------------

Introduction to Memory and Memory parameters. Classifications of primary and Secondary memories. Types of RAM and ROM, Allocation policies, Memory Hierarchy and characteristics. Cache memory: Concept, architecture (L1, L2, L3), Mapping techniques. Cache Coherency, Interleaved and Associative memory.

Unit-V	I/O Organization	4 Hrs.
---------------	-------------------------	---------------

Input/output systems, I/O modules and IO processors. Types of data transfer Techniques: Programmed I/O, Interrupt driven I/O and DMA.

Computer Organization and Architecture Laboratory (RCP23EPE302L)

List of Laboratory Experiments: (Any 8)

1. To study Full Adder (7483).
2. To study ALU (74181).
3. To study MASM (Micro Assembler).
4. A program for hexadecimal addition and multiplication.
5. A program for binary multiplication.
6. A program for Hamming code generation, detection and correction.
7. A program for Booth's multiplication
8. A program for LRU page replacement algorithm
9. A program for FIFO page replacement algorithm
10. A program to simulate the mapping techniques of Cache memory.
11. Direct Mapped cache.
12. Associative Mapped cache

Minimum eight experiments from the above suggested list or any other experiment based on syllabus to be included, which would help the learner to apply the concept learnt.)

Program: Electronics and Telecommunication Engineering	T.Y.B. Tech
	Sem-V
Control System (RCP23EPE313)	
Control System Laboratory (RCP23EPE313L)	

Pre-requisite:

- Basic Electrical Engineering & Digital Electronics
- Engineering Mathematics-I
- Engineering Mathematics-II
- Signal and Systems

Course Objectives:

- To provide fundamental concept of control systems.
- To introduce mathematical modelling, time domain analysis & frequency domain analysis.
- To develop concepts of stability and its assessment criteria of the system.
- To study basic concepts of controllers.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the basic concepts of control system	L2	Understand
CO2	Derive the mathematical model of different type of the systems.	L3	Apply
CO3	Analysis of systems in time and frequency domain	L4	Analyze
CO4	Analyze and Find stability of given system using appropriate criteria	L4	Analyze
CO5	Apply the control theory to design the conventional controllers widely used in the industries.	L3	Apply

Control Systems (RCP23EPE303)

COURSE CONTENTS

Unit-I	Introduction to Control System	8 Hrs.
---------------	---------------------------------------	---------------

Introduction: Open loop and closed loop systems, feedback and feed forward control structure, examples of control systems. Modelling: Types of models, impulse response model, state variable model, transfer function model. Dynamic Response: Standard test signals, transient and steady state behaviour of first and second order systems, steady state errors in feedback control systems and their types.

Unit-II	Mathematical Modelling of Systems	10 Hrs.
----------------	--	----------------

Conversion of block diagram to signal Flow Graph and Vice-versa., Transfer Function models of various Electrical systems, Block diagram reduction for MIMO and SISO systems, signal flow graph, Masons gain rule.

Unit-III	State Variable Models	7 Hrs.
-----------------	------------------------------	---------------

Basic concepts, state variable and state models for electrical systems, general state space representation, conversion between state space and transfer function, concept of state transition matrix, properties of state transition matrix, controllability and observability, analysis of LTI systems, with Examples

Unit-IV	Stability Analysis	10 Hrs.
----------------	---------------------------	----------------

Concept of stability, Routh stability criterion, Root-locus, general rules for constructing root-locus, Magnitude and phase plot; Method of plotting Bode plot; Stability margins on the Bode plots, Nyquist stability criterions gain and phase margins. Case study on stability of Control System in Thermal Power Plant.

Unit-V	Controllers Compensators	7 Hrs.
---------------	---------------------------------	---------------

Introduction of PI, PD, and PID Controllers, Lead and Lag compensators. Case study on a model driven PID control system.

Control Systems Laboratory (RCP23EPE303L)

List of Laboratory Experiments: (Any Eight)

1. To verify the effect of zero and pole to the second order closed loop control system.
2. To find static errors for type 0, type 1, type 2 Control System.
3. To plot frequency response of a 1st order and 2nd order control systems.
4. To find transfer function of a 1st order and 2nd order control systems.
5. To verify the effect of Zero and pole to open loop transfer function of a second order.
6. To find controllability & observability of the given control system.
7. To design root locus for given control system.
8. To design Bode plot for first and second order control system.
9. Verification of observability and controllability for given control system.
10. To design Nyquist plot for given control system.
11. To find Transfer functions of P, PI, and PID controller.

Minimum eight experiments from the above suggested list or any other experiment based on syllabus to be included, which would help the learner to apply the concept learnt.

	Sem-V
Linear Algebra (RCP23EPE314)	
Linear Algebra Laboratory (RCP23EPE314L)	

Pre-requisite:

- Mathematics for Telecommunication Engineering

Course Objectives:

- Understanding basic concepts of linear algebra to illustrate its power and utility through applications.
- Apply the concepts of vector spaces, linear transformations, matrices and inner product spaces in Engineering.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the abstract concepts of matrices and system of linear equations using decomposition Methods.	L2	Understand
CO2	Demonstrate the basic notion of vector spaces and subspaces.	L3	Apply
CO3	Apply the concept of vector spaces using linear transforms and inner product spaces applications in cryptography.	L3	Apply

Linear Algebra (RCP23EPE304)

COURSE CONTENTS

Unit-I	System of Linear Equations	6 Hrs.
---------------	-----------------------------------	---------------

Gaussian elimination and Gauss Jordan method Elementary matrices Permutation matrix inverse matrices System of linear equations LU factorizations.

Unit-II	Vector Spaces	12 Hrs.
----------------	----------------------	----------------

The Euclidean space and vector space, subspace linear combination, span-linearly dependent-independent bases, dimensions, finite dimensional vector space, The four fundamental spaces, Rank and nullity Bases for subspace.

Unit-III	Linear Transformations	10 Hrs.
-----------------	-------------------------------	----------------

Linear transformations, Basic properties, invertible linear transformation, matrices of linear transformations, vector space of linear transformations, change of bases

Unit-IV	Product Spaces and Applications	8 Hrs.
----------------	--	---------------

Dot products and inner products, the lengths and angles of vectors, matrix representations of inner products, Gram-Schmidt Orthogonalization, QR factorization- Projection - orthogonal projections

Unit-V	Applications	6 Hrs.
---------------	---------------------	---------------

An Introduction to coding - Classical Cryptosystems Plain Text, Cipher Text, Encryption.

Linear Algebra Laboratory (RCP23EPE304L)

List of Tutorial: (Any Eight)

1. Gaussian elimination and Gauss Jordan Method
2. LU Factorizations.
3. The Four Fundamental Spaces.
4. Linear Transformations.
5. Gram-Schmidt Orthogonalization.
6. QR Factorization.
7. Linear Dependence and Independence.
8. Least Squares Approximation.
9. Case Study: Classical Cryptosystems.
10. Gaussian elimination and Gauss Jordan method.

Program: Electronics and Telecommunication Engineering	T.Y.B. Tech
	Sem-V
Advanced Microcontroller (RCP23EPE315)	
Advanced Microcontroller Laboratory (RCP23EPE315L)	

Pre-requisite:

- Digital System Design
- Microcontroller & Applications- I

Course Objectives:

- To provide an in-depth understanding of the ARM Cortex-M architecture, focusing on the STM32F401RE microcontroller.
- To equip students with the skills to program and debug advanced microcontrollers.
- To enable the design and implementation of real-world embedded systems using STM32F401RE.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the architecture and functionality of the ARM Cortex-M family.	L2	Understand
CO2	Describe the architecture and functionality of the STM32F401RE microcontroller.	L2	Understand
CO3	Develop the programs for peripherals, sensors and actuators.	L6	Create
CO4	Design and implement microcontroller-based systems for real world applications	L6	Create

Advanced Microcontroller (RCP23EPE305)

COURSE CONTENTS

Unit-I	ARM Family and Cortex-M Architecture:	8 Hrs.
---------------	--	---------------

Introduction to ARM Microcontrollers: ARM Cortex-M Family: ARM Cortex-M series overview (M0, M3, M4, M7), Features of ARM Cortex- M4: Harvard architecture, pipeline, and instruction set

Unit-II	Introduction to STM32 Microcontrollers	8 Hrs.
----------------	---	---------------

STM32 family overview (F0, F1, F4, L4 series), Features of STM32F401RE: processor core, clock speed, overview of bus architecture (AHB, APB), memory organization, memory mapping and peripherals, Introduction to STM32 development tools: STM32CubeIDE and STM32CubeMX.

Unit-III	GPIO and Interrupt Programming	8 Hrs.
-----------------	---------------------------------------	---------------

GPIO Configuration: Input, output, alternate function, Pull-up/pull-down resistors and pin speed configuration, Basic input/output operations: LED blinking and push-button interfacing, Interrupt Handling NVIC and its configuration, External interrupts.

Unit-IV	Timers, PWM, and ADC	9 Hrs.
----------------	-----------------------------	---------------

Timers and Delay Generation: Overview of STM32 timers, Configuring general-purpose timers for delay generation, PWM and Applications: PWM generation using timers, Controlling brightness of an LED and speed of a DC motor using PWM Analog-to-Digital Conversion (ADC): ADC architecture and configuration, Single-channel and multi-channel ADC, Interfacing analog sensors (e.g., temperature sensors).

Unit-V	Serial Communication (UART)	9 Hrs.
---------------	------------------------------------	---------------

Configuring UART for data transmission and reception, I2C and SPI Communication: Overview and comparison of I2C and SPI protocols, Configuring STM32F401RE for I2C and SPI communication, IoT Applications: Interfacing STM32F401RE with Wi-Fi modules (ESP8266/ESP32), Cloud integration using MQTT/HTTP protocols.

Advanced Microcontroller Laboratory (RCP23EPE305L)

List of Laboratory Experiments: (Any Eight)

1. Setting up STM32 IDE and writing a basic LED blinking program.
2. Interfacing an LED and Push-Button with GPIO Input and Output Operations.
3. Implementing Push-Button Controlled LED Toggle Using External Interrupt.
4. Implementing LED Blinking Using Delay Generation with General-Purpose Timers.
5. Interfacing and Speed Control of a DC Motor Using PWM.
6. Timer-based PWM generation for LED brightness control.
7. FADC-based temperature sensor interfacing.
8. UART communication for data transmission and reception.
9. Interfacing and Reading Sensor Data from MPU6050 using I2C Communication.
10. Interface an SPI device, such as an EEPROM, and perform read/write operations.
11. Interfacing STM32F401RE with a Wi-Fi module (ESP8266/ESP32).

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Neural Network and Fuzzy Logic (RCP23EPE316)	
Neural Network and Fuzzy Logic Laboratory (RCP23EPE316L)	

Pre-requisite:

- Mathematics for Telecommunication Engineering

Course Objectives:

- To introduce the concepts and understanding of artificial neural networks and fuzzy logic.
- To introduce neural network design concepts.
- To expose neural networks-based methods to solve real world complex problems.
- To provide knowledge of fuzzy logic to design the real-world fuzzy systems.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain training of Neural Networks using various training rules with consideration of different parameters like overfitting, under fitting.	L2	Understand
CO2	Calculate and update the weights of the neural networks to specify the working and applications of different types of neural networks.	L3	Apply
CO3	Design fuzzy sets for various applications and solve fuzzy set theory problems.	L6	Create
CO4	Design various engineering application using Neural Networks/ Fuzzy Logic.	L6	Create

Neural Network and Fuzzy Logic (RCP23EPE306)

COURSE CONTENTS

Unit-I	Essentials of Artificial Neural Networks	4 Hrs.
---------------	---	---------------

Introduction, Humans and Computers, Organization of the Brain, Biological Neuron, Biological and Artificial Neuron Models, Characteristics of ANN, Artificial Neuron Model, Operation of Artificial Neuron, Types of Neuron Activation Function, ANN Architectures, McCulloch-Pitts Model, Potential Applications of ANN, Classification Taxonomy of ANN Connectivity, Learning Strategy (Supervised, Unsupervised, Reinforcement), Learning Rules

Unit-II	Supervised Neural Networks	12 Hrs.
----------------	-----------------------------------	----------------

Feed forward neural network, Single-Layer feed forward architecture-Perceptron, Multiple-Layer feed forward architecture, Types of feed forward networks, multi-layer perceptron, Training MLP: The back-propagation algorithm, Introduction to the concept of Support Vector Machine based classifier, GRADIENT-DESCENT algorithm, Generalization, Metrics for evaluation of classification method, Steps to use neural networks to data, over fitting, Detecting over fit models: Cross validation

Unit-III	Unsupervised Learning Neural Networks	12 Hrs.
-----------------	--	----------------

Competitive Learning Networks – Maxnet, Mexican Hat Net, Kohonen Self-Organizing Networks – architecture, training algorithm, K-means, Radial Basis Function (RBF) neural network – architecture and algorithm, and Discrete Hopfield networks.

Unit-IV	Unsupervised Learning Neural Networks	10 Hrs.
----------------	--	----------------

Introduction to fuzzy logic, Basic Fuzzy logic theory, Fuzzy sets - properties & operations, Fuzzy relation - Operations on fuzzy relations, Fuzzy Membership functions, Fuzzy Rules and Fuzzy Reasoning, Fuzzification and Defuzzification methods, Fuzzy Inference Systems, Mamdani Fuzzy Models, Fuzzy knowledge-based controllers, Sugeno Fuzzy Models.

Unit-V	Fuzzy logic	6 Hrs.
---------------	--------------------	---------------

Introduction to fuzzy logic, Basic Fuzzy logic theory, Fuzzy sets - properties & operations, Fuzzy relation - Operations on fuzzy relations, Fuzzy Membership functions, Fuzzy Rules and Fuzzy Reasoning, Fuzzification and Defuzzification methods, Fuzzy Inference Systems, Mamdani Fuzzy Models, Fuzzy knowledge-based controllers, Sugeno Fuzzy Models.

Unit-VI	Applications of Fuzzy Logic and Fuzzy Systems	6 Hrs.
----------------	--	---------------

Fuzzy pattern recognition, fuzzy C-means clustering, fuzzy image processing, Simple applications of Fuzzy knowledge-based controllers like washing machines, home heating system, and train break control.

Neural Network and Fuzzy Logic Laboratory (RCP23EPE306L)

List of Laboratory Experiments: (Any Eight)

1. Fuzzy Set Operations: AND, OR, D-Morgan's theorem
2. (a) Simulation of Mamdani Fuzzy Inference System for washing machine control
(b) Summary of research paper based on Fuzzy logic
3. Simulation of Sugeno Fuzzy Inference System for given application
4. Simulation of Mamdani Fuzzy Inference System for image processing application. (Edge detection)
5. Write a program for perceptron training algorithm and test it for two input AND OR gate function
6. Write a program for training and testing of Multilayer Perceptron for two input EX-OR gate
7. Write a program for training and testing of Multilayer Perceptron for character recognition application
8. Program for Radial basis neural network for interpolation application
9. Write a program for training and testing of RBF for pattern classification application
10. Kohonen Self Organising map for image classification
11. To Study the use of Microsoft Machine Learning Studio (classic) in Neural Network and Machine Learning

Minimum eight experiments from the above suggested list or any other experiment based on syllabus to be included, which would help the learner to apply the concept learnt.

Database Management System (RCP23EMD301)	
Database Management System Laboratory (RCP23EMD301L)	

Prerequisite:

- Structured Programming using C
- Object Oriented Programming using Java

Course Objectives:

- Learn and practice data modelling using the entity relationship and developing database designs.
- Understand the use of Structured Query Language (SQL) and learn SQL syntax.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the fundamental concepts of databases, including design, architecture, and data models.	L2	Understand
CO2	Design E-R diagrams, convert to relational schema and use relational algebra queries.	L6	Create
CO3	Construct SQL queries to perform operations on the database.	L3	Apply
CO4	Explain transaction management techniques.	L2	Understand

Database Management System (RCP23EMD301)

COURSE CONTENTS

Unit-I	Introduction to Databases and Data models	6 Hrs.
---------------	--	---------------

Introduction, Characteristics of databases, File system vs. database system, Users of the database system, Schema and Instance, Data Independence, level of abstraction, DBMS system architecture, The importance of data models, Types of data models.

Unit-II	Relational Data Model	8 Hrs.
----------------	------------------------------	---------------

Entity–Relationship Model: Entity types: Weak and strong entity sets, Entity sets, Types of Attributes, Keys, Relationship constraints: Cardinality and Participation.

Relational Model: Introduction to the Relational Model, relational schema and concept of keys, Mapping the ER Model to the Relational Model Relational Algebra: Unary and Set operations, Relational Algebra Queries.

Unit-III	Structured Query Language (SQL) and Normalization	8 Hrs.
-----------------	--	---------------

SQL: Basic concepts, state variable and state models for electrical systems, general state space representation, conversion between state space and transfer function, concept of state transition matrix, properties of state transition matrix, controllability and observability, analysis of LTI systems, with Examples.

Normalization: Concept of normalization, Function Dependencies, Normal Forms- 1NF, 2NF, 3NF, BCNF.

Unit-IV	Transaction management Concurrency control	6 Hrs.
----------------	---	---------------

Transaction management: ACID properties, serializability and concurrency control, Lock based concurrency control (2PL, Deadlocks), Time stamping methods, optimistic methods, database recovery management

Database Management System Laboratory (RCP23EMD301L)

List of Laboratory Experiments:

1. Output all the data entered in the table
2. Create a table from the given data
3. Insert Data into the table
4. Add a column to the table and set default values
5. Update the data in the given row(s) of the given table
6. Delete all rows in the table
7. Create a table with the given constraints
8. Use a select query to fetch data
9. Use distinct queries to fetch unique data
10. Use the where clause to obtain information that meets specific conditions
11. Use the BETWEEN clause along with WHERE to filter the table based on 2 values
12. Use the AND clause with WHERE to filter the table based on 2 separate conditions
13. Use the OR clause is used along with WHERE to filter the table that meets any one of the given multiple conditions.
14. Use the LIKE operator along with WHERE to filter similar values.
15. Use of additional queries - IS NULL, ORDER BY LIMIT
16. Renaming of columns during output
17. Use the MAX () and MIN () functions to retrieve the maximum and minimum values from a column
18. Combining table - Joins two tables and outputs a single table
19. Use a left join to output data
20. Use a cross join to output the data
21. Use UNION to place a table right on top of another table.
22. Use the WITH query to create temporary tables
23. Use the EXCEPT query to output the data
24. Use the INTERSECT query to output the data
25. Execute a non-correlated subquery independently of the outer query

Environmental Studies(RCP23XHS311T)	

Course Objectives:

- Understand environmental issues such as depleting resources, pollution, ecological problems and the renewable energy scenario.
- Familiarise environment related legislation

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Describe how human activities affect the environment.	L2	Understand
CO2	Describe the various technology options that can make a positive environmental difference.	L2	Understand

Environmental Science Tutorial

COURSE CONTENTS

Unit-I	Social Issues and Environment	4 Hrs.
---------------	--------------------------------------	---------------

Ecological footprint and Carrying Capacity, Depleting nature of Environmental resources such as soil, water minerals and forests, Carbon emissions and Global Warming.

Unit-II	T Directive Principles of State Policy	5 Hrs.
----------------	---	---------------

Technological growth for Sustainable Development: Social, Economic and Environmental aspects of Sustainable Development, Renewable Energy Harvesting, Concept of Carbon credit, Green Building, Power and functions of Central Pollution Control Board and State Pollution Control Board.

Unit-III	Environmental impact due to technology	5 Hrs.
-----------------	---	---------------

Environmental impact due to technology: Impact of Energy on Environment, Flow of Energy in Eco- logical system, Environment Degradation due to Energy, Control of pollution from Energy, Consumer electronics, power saving devices, energy from waste, energy use and conservation.

Text Books

Semester Project- III (RCP23XSC301P)	

Course Objectives:

- To determine the goals, resource requirements of project and produce them in the form of documentation.
- To learn effective utilization of time and project management skills.
- To address the real-world projects, to connect theory with practice as per recent industrial trends.
- To integrate knowledge and skills from various areas through more complex and multidisciplinary projects.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Analyze a survey of several available literatures in the preferred field of study.	L4	Analyze
CO2	Describe various/alternate approaches to complete a project.	L2	Understand
CO3	Apply a collaborative project environment by interacting and dividing project work among team members.	L3	Apply
CO4	Use technical communication skills to present project work in the form of a technical report/paper.	L3	Apply
CO5	Apply teamwork and project management skills to plan, execute, and manage the research study.	L3	Apply

Semester Project- III (RCP23XSC301P)

COURSE CONTENTS

Domain knowledge (any beyond) needed from the following areas for the effective implementation of the project:

- Microcontroller and Embedded Systems
- Signal Processing
- Microwave and Antennas
- Networking and Internet of Things
- Data science and big data, Communication
- Web and Application development
- Robotics, AI and Machine learning.

The above areas can be updated based on the technological innovations and development needed for specific project.

Guidelines: The main purpose of this activity is to improve the students' documentation and technical skills to find the cost-effective solution. Guidelines are as follows:

- Project group: 4 to 6 students (including 2/3 second year and 2/3 third year).
- Each group will be allotted a final year mentor and a faculty guide.
- Groups submit three topic preferences; one is finalized in discussion.
- Identify required hardware and software for the problem statement.
- Two reviews per semester: August and October.
- First review: literature survey, documentation, budgeting.
- Second review: at least 30% project completion.

Assessment Criteria:

- Final submission of report in prescribed format post guide confirmation.
- Evaluation by departmental committee including guide.
- Oral exam by internal and external examiners with presentation/demo.

Prescribed Project Report Format: Minimum 25 pages, including:

- Introduction
- Literature Survey
- Related Theory
- Implementation Details
- Project Outcomes
- Conclusion
- References

Assessment criteria for the departmental committee (including project guide) for continuous assessment:

- Guide will monitor weekly progress and marks allocation will be as per Table 2.

Table 1: Log Book Format

Sr. No	Week (Start Date: End Date)	Work Done	Sign of Guide	Sign of Coordinator
1				

Table 2: Continuous Assessment Sheet

Sr. No	Exam Seat No	Name of Student	Student Attendance	Log Book Maintain	Literature Review	Depth of Understanding	Report	Total
			5	5	5	5	5	25

- Assessment criteria for the departmental committee (including project guide) for End Semester Exam:
- Departmental committee (including project guide) will evaluate project as per Table 3. Each group shall present/publish a paper based on the semester project in reputed/peer reviewed Conference/Journal/TechFest/Magazine/ before the end of the semester.

Each group will be reviewed twice in a semester by faculty guide and faculty coordinator based on the following criteria:

1. Objective and Expected outcome
2. Long term social impact
3. Innovativeness and Motivation
4. Documentation
5. Simulation effectiveness
6. Literature survey and Comparative Methodology
7. Project Progress/Implementation
8. Overall Presentation and Team work

Each review consists of 25 marks. The average of the marks scored in both the two reviews will be considered for final grading. The final certification and acceptance of TW ensure the satisfactory performance on the above aspects.

Table 3: Evaluation Sheet

Sr. No	Exam Seat No	Name of Student	Project Selection	Design/ Simulation/ Logic	PCB/ hardware/ programming	Result Verification	Presentation	Total

	Sem-V
Edge AI and Intelligent Connectivity (RCP23ESC301) (Coursera Course)	

Course Objectives: At the end of this course, students will be able to:

- Understand the fundamentals of AI, ML, DL, Edge Computing, IoT, and 5G technologies.
- Develop and implement AI/ML models using Python to solve real-world problems.
- Apply Edge AI, Tiny ML, IoT, and 5G to build intelligent and secure solutions.
- Evaluate the business, security, and digital transformation aspects of AI, IoT, Edge Computing, and 5G integration.
- Design innovative AI-enabled solutions for industrial, healthcare, and business applications using AI, ML, DL, Edge Computing, IoT, and 5G.

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the fundamentals of AI, ML, DL, Edge Computing, IoT, and 5G and their applications.	L2	Understand
CO2	Apply Python and AI/ML techniques to develop data-driven intelligent solutions.	L3	Apply
CO3	Analyze the performance of ML/DL models and select appropriate AI techniques for different applications.	L4	Analyze
CO4	Evaluate the integration of Edge Computing, Tiny ML, IoT, and 5G for secure and efficient digital transformation.	L5	Evaluate
CO5	Design AI-enabled intelligent solutions using AI, ML, DL, Edge Computing, IoT, and 5G for real-world applications.	L6	Create

Course 1: AI Principles with Edge Computing

COURSE CONTENTS

Unit-I	Artificial Intelligence (AI) and its next wave: Edge computing	3 Hrs.
---------------	---	---------------

By the end of this module on Artificial Intelligence and its Next Wave -Edge Computing, learners will be able to :Understand the scope of AI and Edge Computing; Able to acquire the skills in industries using the Edge AI technology; Able to interpret the role of edge computing in IoT

Unit-II	Python Demos and Case-Studies on Machine Learning (ML) Algorithm	4 Hrs.
----------------	---	---------------

Fundamentals

By the end of this module on Python Demos and Case-Studies on Machine Learning (ML) Algorithm Fundamentals, learners will be able to: interpret errors in machine learning, such as bias and variance; Gain insights of implementing ML in real-time domains such as healthcare, banking, and industries; Acquire the capability to perform Exploratory Data Analysis (EDA) processes using the Python programming language; Develop the skills to model ML algorithms for predicting lung cancer disease

Unit-III	Demonstrating Unsupervised & Reinforcement Machine Learning	4 Hrs.
-----------------	--	---------------

Algorithms with Python demos

By the end of this module on Demonstrating Unsupervised & Reinforcement Machine Learning Algorithms with Python demos, learners will be able to: Model a k-means clustering algorithm through a demo; Develop an application demo employing DBSCAN clustering on a dataset; demonstrate the use of COBOTs in industrial automation.

Unit-IV	Principles and successful demonstrations of Neural Networks (Text	4 Hrs.
----------------	--	---------------

Analytics)

By the end of this module on Principles and successful demonstrations of Neural Networks (Text Analytics), learners will be able to: demonstrate digit recognition using MLP and CNN; Develop a Python program to identify over fitting and under fitting issues in an ML model; develop an ML network using the WEKA tool.

Unit-V	Advanced Applications with Deep Learning Networks	3 Hrs.
---------------	--	---------------

By the end of this module on Advanced Applications with Deep Learning Networks, learners will be able to: Identify the vanishing and unstable gradient problems in a deep learning model; Apply DL for banana leaf disease detection; Apply CNN for Pneumonia Detection; Model an advanced CNN-based ML system to recognize images

Unit-VI	IoT with AI and edge computing	3 Hrs.
----------------	---------------------------------------	---------------

By the end of this module on IoT with AI and edge computing, learners will be able to: Understand the working principles of the Tiny ML system; Identify the need for compression techniques; Interpret High Computing Machine based Edge Architecture; Learn the functionalities of the Arduino IDE and programming on the Arduino Nano BLE development board

Course 2: Business Considerations for 5G with Edge, IoT, and AI

COURSE CONTENTS

Unit-I	Introduction to 5G and its impact on Business	3 Hrs.
▪ Explore the fundamentals of telecommunications advancements through an in-depth look at 5G technology, covering its evolution and core concepts. ▪ Delve into edge computing's role in augmenting business agility and its wide-ranging applications across various industries. ▪ Gain insights into the integration of 5G within digital transformation endeavours, discerning the opportunities it presents alongside the challenges. ▪ By the module's conclusion, participants will possess comprehensive knowledge of 5G technology, edge computing's business implications, and the intricate dynamics of incorporating 5G into digital transformation strategies.		
Unit-II	Integrating IOT and AI with 5G for Business Success	2 Hrs.
▪ This module delves into the convergence of IoT technologies within 5G environments, examining both the opportunities and challenges they present for business applications. ▪ Participants will explore strategic methodologies for integrating AI solutions seamlessly within 5G networks, enhancing overall performance and operational efficiency. ▪ Additionally, the module addresses critical security and privacy concerns inherent in integrating 5G, IoT, and AI ecosystems, equipping participants with the knowledge to implement robust measures for safeguarding sensitive data and ensuring privacy compliance. ▪ By mastering these concepts, participants will be well-prepared to navigate the complexities of deploying IoT and AI solutions in 5G environments securely and effectively.
