

Shirpur Education Society's

R. C. Patel Institute of Technology, Shirpur
(An Autonomous Institute)

Course Structure

Second Year B. Tech. (Electrical Engineering)

with effect from Academic Year 2022-23

Shahada Road, Near Nimzari Naka, Shirpur, Maharashtra 425405
Ph. No.: 02563 259 802, web: www.rcpit.ac.in

Vision of the Institute

To become a leading Institute in Technical education fostering innovation, research, ethical values, and sustainable development for the betterment of society.

Mission of the Institute

To impart high quality Technical Education through:

- **M1:** Innovative and Interactive learning process and high quality, globally recognized instructional programs.
- **M2:** Fostering a collaborative scientific temper among students with ethical responsibility towards the society.
- **M3:** Preparing students from diverse backgrounds to have aptitude for employment, entrepreneurship and research with a spirit of professionalism.
- **M4:** To contribute to the nation's sustainable development.

Vision of the Electrical Engineering Department

To produce competent Electrical Engineers committed to innovation, sustainability and service to society.

Mission of the Electrical Engineering Department

- **M1:** Deliver innovative, interactive learning fostering excellence in Electrical Engineering and emerging technologies.
- **M2:** Cultivate scientific inquiry, ethical responsibility, and interdisciplinary collaboration to address energy, automation, and societal challenges.
- **M3:** Empower diverse students with skills for employment, entrepreneurship, and research, nurturing professionalism and lifelong learning.

Program Educational Objectives

The educational objectives of the Undergraduate Programmes of Electrical Engineering are:

- **PEO1:** Graduates will apply electrical engineering knowledge and innovation to solve complex industrial and societal problems.
- **PEO2:** Graduates will demonstrate ethical leadership and collaborate across disciplines to promote sustainable and inclusive development.
- **PEO3:** Graduates will pursue careers in employment, entrepreneurship, or research, embracing professionalism and lifelong learning.

Second Year B. Tech. Electrical Engineering Semester-III (with effect from 2022-23)

Program: Electrical Engineering	S. Y. B. Tech.	Semester: III
Engineering Mathematics - III (BSEE3010T)		

Course Objectives

1. To build the strong foundation in Mathematics of learner needed for the field of Electrical Engineering.
2. To provide learner with mathematics fundamentals necessary to formulate, solve and analyses complex engineering problems.
3. To prepare student to apply reasoning informed by the contextual knowledge to engineering practice.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Demonstrate basic knowledge of Laplace Transform, Fourier series, Vector Algebra, and Complex Variable.	L2	Understand
CO2	Identify and model problems in the field of Electrical Engineering and solve them.	L4	Analyze
CO3	Apply the application of Mathematics in Electrical Engineering.	L3	Apply

Engineering Mathematics - III (BSEE3010T)

Course Contents

Unit-I

10 Hrs.

Laplace Transform: Laplace Transform (LT) of Standard Functions: Definition of Laplace transform, Condition of Existence of Laplace transform, Laplace transform of e^{at} , $\sin at$, $\cos at$, $\sinh at$, $\cosh at$, t^n . Heaviside unit step function, Dirac-delta function, Laplace transform of Periodic function Properties of Laplace Transform: Linearity, first shifting theorem, second shifting theorem, multiplication by t^n , Division by t , Laplace Transform of derivatives and integrals, change of scale, convolution theorem, Evaluation of integrals using Laplace transform.

Unit-II

08 Hrs.

Inverse Laplace Transform and its Applications: Partial fraction method, Method of convolution, Laplace inverse by derivative. Applications of Laplace Transform: Solution of ordinary differential equations, Solving RLC circuit differential equation of first order and second order with boundary condition using Laplace transform (framing of differential equation is not included).

Unit-III

08 Hrs.

Fourier Series: Introduction: Orthogonal and orthonormal set of functions, Introduction of Dirichlet's conditions, Euler's formulae. Fourier Series of Functions: Exponential, trigonometric functions of any period $=2L$, even and odd functions, half range sine and cosine series. Complex form of Fourier series.

Unit-IV

09 Hrs.

Vector Algebra, Vector Differentiation & Vector Integral: Vector differentiation, Gradient of scalar point function, Divergence and Curl of vector point function Properties: Solenoidal and irrotational vector fields, conservative vector field. Vector Integral: Green's theorem in a plane, Gauss' divergence theorem and Stokes' theorem.

Mapping: Conformal mapping, Bilinear transformations, cross ratio, fixed points.

Unit-V

07 Hrs.

Complex Variable: Analytic Function: Necessary and sufficient conditions (No Proof), Cauchy Riemann equation Cartesian form (No Proof) Cauchy Riemann Equation in polar form (with Proof), Milne Thomson Method and its application, Harmonic function, orthogonal trajectories. Mapping: Conformal mapping, Bilinear transformations, cross ratio, fixed points.

Text Books

1. H.K. Das, "Advanced Engineering Mathematics", S . Chand, 2008.
2. Kanti B. Datta, "Mathematical Methods in Science and Engineering", Cengage India; 1st edition (January 1, 2012).
3. B.S. Grewal, "Higher Engineering Mathematics", Khanna Publication.

Reference Books

1. B. V. Ramana, "Higher Engineering Mathematics", Tata Mc-Graw Hill Publication
2. Wylie and Barret, "Advanced Engineering Mathematics", Tata Mc-Graw Hill 6th Edition.
3. Erwin Kreyszig, "Advanced Engineering Mathematics", John Wiley & Sons, Inc.
4. Murry R. Spieget, "Vector Analysis", Schaum's outline series, Mc-Graw Hill Publication.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: III
Electrical Circuit Theory (PCEE3020T)		
Electrical Circuit Theory Laboratory (PCEE3020L)		

Prerequisite: Basic Electrical Engineering, Linear Algebra.

Course Objectives

1. To understand circuit analysis using network theorems.
2. To understand the network topology and duality of the network.
3. To understand the transient and steady state response of the circuits.
4. To understand the network parameter for circuit analysis and frequency selective networks.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Identify the network, solve electric circuits by applying various network laws and theorems.	L3	Apply
CO2	Solve electric circuits by applying graph theory principles.	L3	Apply
CO3	Solve the first order and second order differential equation to determine the transient and steady state response of circuit.	L3	Apply
CO4	Analyze waveform and circuit using Laplace transform.	L4	Apply
CO5	Design and evaluate two port network, frequency selective circuits.	L6	Create

Electrical Circuit Theory (PCEE3020T)

Course Contents

Unit-I

05 Hrs.

Circuit Analysis using Theorems: Mesh and Supermesh analysis, Node and Supernode analysis
Circuit Theorems for Independent and Dependent sources: Superposition, Thevenin's, Norton's Reciprocity, Maximum Power Transfer Theorem and Millman Theorem.

Unit-II

08 Hrs.

Network Topology : Graph of network, oriented graph, definition of basic terminologies of graph theory, tree, cotree, link, twigs, incidence and reduced incidence matrix, loop and tieset matrix, cutset and fundamental cutset matrix, Network Equilibrium equations in matrix form: Mesh or Loop or KVL Equilibrium, Node or KCL Equilibrium equations, Dual circuit and Duality.

Unit-III

08 Hrs.

Transient Analysis of Circuit in Time Domain : Solution of differential equation, General and particular solutions, Particular integral and complimentary function, series and parallel R-L, R-C and R-L-C circuits, Mathematical analysis of circuit transients, Charging and discharging condition, time constant of the circuit, Analysis with initial conditions and without initial condition in network, steady state and transient state response, Over damped and Underdamped series RLC circuit.

Unit-IV

07 Hrs.

Transient Analysis of Circuit in Frequency Domain : Laplace Transform (LT) its properties, Complex frequency. Solution of differential equation using Laplace transform, LT of standard mathematical functions, LT of standard test signals, LT of R, L and C. Inverse LT. Analysis of RL, RC and RLC circuits using LT, Initial condition.

Unit-V

07 Hrs.

Two Port Network: Two Port Network: Introduction to Two port networks analysis, Reciprocity and Symmetry conditions, Open circuit Impedance parameters, Short circuit Admittance parameters, Transmission parameters, Inter conversion of parameters, Interconnection of Two port parameters: series and parallel connection.

System and Network Functions: Driving point impedance and Admittance functions, transfer impedance and admittance, voltage and current transfer ratio.

Unit-VI

07 Hrs.

Attenuators and Frequency Selective Networks:

Attenuators: Attenuation, Types of attenuators, Symmetrical T type attenuator, Symmetrical π type attenuator, Symmetrical bridged T type attenuator, Symmetrical lattice type attenuator.

Introduction Filters Circuit: Introduction to Filters, Pass band, Attenuation band, Low Pass Filter, High Pass Filter, Band Pass Filter, Band Reject Filter, cutoff frequency.

Resonance Circuit: R-L-C series circuits, Series resonance Variation of Z with frequency, maximum value of V_C and V_L , Bandwidth, Q factor. Parallel Resonance: Resonance frequency, Locus diagram of series R-L, R-C with variable R and X.

Electrical Circuit Theory Laboratory (PCEE3020L)

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Verification of Superposition Theorem.
2. Verifications of Thevenin's Theorem.
3. Verification of Maximum Power Transfer Theorem.
4. Verification of Reciprocity Theorem.
5. Determination of transient response of current in RL and RC circuits with step voltage input using simulation tools.
6. Determination of transient response of current in RLC circuit with step voltage input for under damped, critically damped and over damped cases.
7. Measurement of Z parameter of two port network.
8. Measurement of Y parameter of two port network.
9. Measurement of parameters using Interconnection of two port network.
10. Determination of frequency response of current in series RLC circuit with sinusoidal ac input.
11. Determination of driving point and transfer functions of a two port ladder network and verify with theoretical values.
12. Determine characteristics of Low pass and high pass filter.
13. Design and verification cut off frequency of Band Pass Filter.
14. Determination of transient response of current in underdamped, overdamped and critically damped RLC circuit with standard input signals.
15. Determination of voltage and current using network equilibrium using node base equation.
16. Determination of voltage and current using network equilibrium using loop base equation.
17. Determination of transient response of current in RLC circuit with step voltage input for under damped, critically damped and over damped cases using simulation tools.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Practical examination will be based on the entire syllabus including, the practicals performed during laboratory sessions.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: III
Analog and Digital Electronics (PCEE3030T)		
Analog and Digital Electronics Laboratory (PCEE3030L)		

Prerequisites: Basic Electrical and Electronics Engineering, Concepts of semiconductors and P-N junction, gate and number system

Course Objectives

1. This course aims to introduce students the basic features of transistor amplifier.
2. It intends to provide knowledge and experience for implementing simple electronic circuits to meet or exceed design specifications.
3. It is aimed to enable students for implementing combinational logic circuits for various applications.
4. It intends to provide knowledge for implementation of sequential circuits using flip-flops.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Summarize various analog and digital circuits.	L2	Understand
CO2	Implement analog and digital circuits to meet stated applications	L3	Apply
CO3	Construct basic analog filters, combinational and sequential circuits	L3	Apply
CO4	Solve the K-map of 2, 3 and 4 variable.	L3	Apply
CO5	Analyze the performance of electronic circuits	L4	Analyze

Analog and Digital Electronics (PCEE3030T)

Course Contents

Unit-I

08 Hrs.

Transistor Amplifiers and Voltage Regulators: Introduction, Types of Configuration: common base, common emitter and common collector configurations, operating point, DC load line analysis, stability and DC biasing circuits, Cascade amplifier, Voltage regulators, short circuit protection, fixed voltage regulators ($\pm 5\text{ V}$, $\pm 12\text{ V}$).

Unit-II

08 Hrs.

Fundamentals of Op-Amps and Timer IC: Block Diagram, Op-Amp parameters and ratings Characteristics, Op-Amp powering, feedback in Op-Amp circuits, inverting, non- inverting amplifiers, adder, subtractor, voltage comparator, difference amplifier, Multivibrator: IC 555 Astable, Monostable and Bistable

Unit-III

08 Hrs.

Applications of Opamps: Instrumentation amplifier, Integrator, Differentiator, Schmitt trigger, Active filters-Low pass, high pass, band pass, all pass, band reject (notch) filters, Current to voltage convertor, voltage to current convertor.

Unit-IV

08 Hrs.

Combinational and Sequential Circuits: Review of postulates of Boolean algebra, Theorems of Boolean algebra, Boolean function and k- map minimization technique for multiple outputs, static & dynamic hazards, multiplexer, de-multiplexer, priority encoder, comparator, half & full adders, tri-state buffers. Latches – S-R latch, D latch, flip-flops-D F/F, J-K F/F, T F/F, master slave J-K F/F, conversion of one F/F to another F/F.

Unit-V

08 Hrs.

Applications of Sequential Circuits: Counters: Modulus of Counter, Synchronous and Asynchronous counters, Ripple counters, drawbacks of ripple counters, Ring counters, Twisted Ring Counters, Shift registers, types of shift registers, design using Flip Flops- Bidirectional shift register, Universal shift register, Digital memories: SRAM, DRAM, ROM, EPROM.

Analog and Digital Electronics Laboratory (PCEE3030L)

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. To Plot input and output characteristics of BJT (CE Configuration).
2. To Plot DC Load Line for BJT (Voltage Divider biasing circuit).
3. Measurement of Op- Amp (IC741) parameters.
4. Design and implementation of integrator, differentiator.
5. Design and implementation of instrument amplifier.
6. Design and implement second order Butterworth LP / HP filter.
7. Setup ADC circuit Using IC LM 741 and study its performance.
8. Design of the astable multivibrator using IC 555.
9. Shadow Sensor Alarm using IC741 op-Amp . **(Innovation)**
10. Sequential Timer(IC-555) for DC Motor Control.
11. Design and implementation of 4 bit Gray to Binary Code Converter.
12. Design and implementation of Half and Full Adder circuits.
13. Demonstration of the JK, D and T flip flops using ICs.
14. To realize and study of Shift Register.
15. Design and implementation of BCD to 7 Segment display decoder using IC 7447/7448
16. Design and implementation of multiplexer and de-multiplexer using ICs
17. Design and implementation of ripple counter using ICs.
18. Design and implementation of 3-bit Synchronous Up/Down counter
19. Construction of adder circuit using Shift Register and full Adder. **(Innovative)**
20. Code conversion circuits- BCD to Excess-3 and vice-versa.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

The Oral/Practical examination will be based on the entire syllabus, including the experiments performed during laboratory sessions.

Text Books

1. Sergio Franco, "Design with Op-Amps and analog Integrated Circuits", Tata McGraw-Hill Publication, 3rd Edition, 2001.
2. Allen Mottershead, "Electronic Devices and Circuits: An Introduction", Prentice Hall India, 2010.
3. A. Anand Kumar, Fundamentals of Digital Circuits, Prentice Hall India, 4th Edition, 2014.

Reference Books

1. R.A. Gayakwad, "Op-Amps & Linear Integrated Circuits", Prentice Hall India, 4th Edition, 2012.
2. R. L. Boylestad and Louis Nashelsky, "Electronic Devices and Circuit Theory", Pearson Publications, Tenth Edition, 2009.
3. M. Moris Mano and Michael Ciletti, "Digital Design", Pearson Publications, 5th Edition.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: III
Electrical Measurement and Instrumentation (PCEE3040T)		
Electrical Measurement and Instrumentation Laboratory (PCEE3040L)		

Prerequisite: Basic Electrical and Electronics Engineering.

Course Objectives

1. This course intends to provide basic concepts of errors in measurements and basic fundamentals of measuring systems. formal representation, computational methods, notation, and vocabulary of linear models, philosophy of measurement..
2. It is aimed to impart skills to classify bridges, measuring instruments and equipment's and also demonstrate digital instruments, advance instruments.
3. Imparting basic knowledge of transducer.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the fundamental concepts of measurement and identify errors in measurements and its statistics.	L2	Understand
CO2	Explain the working principle and mechanism of measuring instruments.	L2	Understand
CO3	Use a proper measuring instrument for a given application.	L3	Apply
CO4	Use proper measuring energy meters and transducer applications.	L3	Apply
CO5	Analyze conventional and modern techniques for measurement of electrical parameters.	L4	Analyze

Electrical Measurement and Instrumentation (PCEE3040T) Course Contents

Unit-I

07 Hrs.

Introduction to Measurement and Instrumentation: Philosophy of Measurement: Methods of Measurement, Measurement System, Classification of instrument system, Characteristics of instruments and measurement system, Errors in measurement and its analysis, Standards.

Unit-II

07 Hrs.

Analog Measurement of Electrical Quantities: Electro dynamic, Thermocouple, Electrostatic and Rectifier type Ammeters and Voltmeters, Electro dynamic Wattmeter, Three Phase Wattmeter, Power in three phase system. Instrument Transformer and their applications in the extension of instrument range, measurement of speed, frequency and power factor .

Unit-III

07 Hrs.

Digital Measurement of Electrical Quantities: Concept of digital measurement, block diagram Study of digital voltmeter, frequency meter Power Analyzer and Harmonics Analyzer; Electronic Multimeter

Unit-IV

07 Hrs.

Measurement of Parameters: Different methods of measuring low, medium and high resistances, measurement of inductance and capacitance with the help of AC Bridges, Q Meter.

Unit-V

07 Hrs.

Introduction to Transducers: Definition, different types of transducers, criteria for selection, general characteristics, dynamic characteristics, transducers for measurement of displacement (RVDT and LVDT), speed, angular rotation, altitude, force, torque, humidity and moisture, pressure, strain and temperature (Thermocouple and RTD method), Hall Effect transducer and applications.

Unit-VI

07 Hrs.

Display Methods, Recorders: Display methods and devices-different types of recorders galvanometric recorders, magnetic recorders, digital recorders, Digital Storage Oscilloscope.

Electrical Measurement and Instrumentation Laboratory (PCEE3040L)

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Study of Various analog and Digital measuring Instruments.
2. Measurement of active power by using two wattmeter method.
3. Measurement of reactive power by using two wattmeter method.
4. Calibration of single phase energy meter.
5. Study of different bridges.
6. Earth resistance measurement using earth tester.
7. Insulation measurement using megger.
8. Design and implementation of bridges.(Innovative)
9. Voltage Measurement. (Innovative)
10. Study of DSO, Power Analyzer.
11. Study of Instrument T/F and its types.
12. Study of Digital torque measurement.
13. Study of Linear Variable differential Transformer.
14. Study of digital frequency meter and digital Voltmeter.
15. Construction of ammeter and voltmeter.
16. Strain measurement using strain gauge.
17. Current Measurement using Falstad. (Innovative)
18. Power Measurement using Matlab (Innovative)

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Practical examination will be based on the entire syllabus including, the practicals performed during laboratory sessions.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: III
Electrical Energy Generation System (PCEE3050T)		

Prerequisites: Knowledge of Basic Electrical Engineering

Course Objectives

1. This course aims to develop familiarity with power system.
2. An understanding of basic abstractions of electrical power generations from conventional and non-conventional sources of energy.
3. To Develop familiarity with the operation of various power plants.
4. To Develop an understanding of the environmental aspects of power generation.
5. To Understand the Challenges of using sources of energy efficiently and effectively.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Demonstrate the knowledge about the electric power generations and their impacts.	L2	Understand
CO2	Analyze the theory and practices of conventional and non-conventional power generation methods.	L4	Analyze
CO3	Determine the operation, maintenance, and working of power plants.	L3	Apply
CO4	Explain the basic physics of wind and solar power generation.	L2	Understand
CO5	Analyze issues related to grid integration of solar and wind energy systems.	L4	Analyze
CO6	Create awareness of the concept of micro-grid and distributed generation systems.	L6	Create

Electrical Energy Generation System(PCEE3050T)

Course Contents

Unit-I

04 Hrs.

Introduction to Generation System Importance of Electrical Energy, Conventional and Non conventional energy Sources, Generation of Electrical Energy, Energy demand growth and supply, Sustainable Development and Role of Renewable Energy Sources. Amount of generation of electric power from Conventional and non conventional sources of energy in India and world.

Unit-II

07 Hrs.

Hydro Power Station: Schematic arrangement of Hydroelectric Power Station, Constituents of Hydro-electric power plant, Classification of HPS: based on head, Storage and pondage, Hydrology, stream flow, flow duration curve, power duration curve, mass curve, reservoir capacity, Water Power equation (Numerical), pumped storage plant and their utility. Micro hydro plants, Advantages and Limitations of Hydro- electric Plants, Potential of hydropower in India- its development and future prospect.

Unit-III

07 Hrs.

Steam Power Station: Introduction, Line diagram of thermal power station (SPS), Site selection Criteria, size and number of units, general layout, Major equipment and auxiliaries of SPS, General study of steam Turbine. Condenser: Different types of condensers. Construction and Working principle of Condenser, Advantages and Limitations of Steam Power Station.

Unit-IV

08 Hrs.

Nuclear Power Station : Environmental aspects for selecting the sites and locations of nuclear power stations, introduction to nuclear physics: Nuclear fusion and fission, Chain reaction, Components of a nuclear reactor, Various types of reactor, material for moderator and control rods, control of nuclear reactors, Special Precautions for NPS, Advantages and Disadvantages of Nuclear Power Station.

Unit-V

08 Hrs.

Solar and Wind Energy Station : Counters: Introductions to Solar and Wind energy, Solar radiation and its Measurement: - Solar constant, Solar radiation at earth's surface, Solar radiation measurement, Solar Energy Collectors: - Physical principles of the conversion of solar radiation into heat, flat plate collectors. Applications of Solar energy, Present and new technological developments in photovoltaic, Principle of wind energy conversion, Site selection considerations, Basic components of wind energy conversion systems (WECS), Classification of WEC systems, Advantages and Limitations of WECS, Types of wind Machines: Horizontal Axis Wind Turbine (HAWT) and Vertical Axis Wind Turbine (VAWT), Potential of wind electricity generation in India and its current growth rate.

Economic aspects in power Generation : Economic aspects in power Generation: Terms commonly used in system operation, various factors affecting cost of generation: Load curves, load duration curves, Connected load, maximum load, Peak load, base load and peak load power plants, load factor, Plant capacity factor, Plant use factor, Demand factor, diversity factor, Concept of microgrid, operation of microgrid in grid-connected as well as isolated mode, Requirements of hybrid/combined use of different renewable and distributed sources, Distributed energy systems and dispersed generation (DG). Control of frequency and voltage of distributed generation in Stand-alone and Grid-connected mode.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: III
Python Programming Language Laboratory (ESEE3060L)		

Course Objectives

1. Install and run Python Interpreter to create and execute programs.
2. Comprehend the concepts file I/O management.
3. Create visualization and plots using appropriate libraries.
4. Apply problem solving techniques and expose students to application development /prototyping.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the installation of Python.	L2	Understand
CO2	Describe Python syntax and implement different data structures.	L2	Understand
CO3	Write functions, use different modules and packages, and perform file handling operations in Python.	L3	Apply
CO4	Interpret object-oriented programming concepts in Python.	L3	Apply
CO5	Apply advanced modules of Python for data analysis and develop applications in fields like data science, machine learning, and numerical techniques.	L3	Apply

Python Programming Language Laboratory (ESEE3060L) Course Contents

Unit-I

02 Hrs.

Introduction to Python Programming: Informal introduction to programming, algorithms and data structures, Downloading and installing Python, run a simple program on Python interpreter.

Unit-II

03 Hrs.

Basics of Python: Numbers in Python, Basic and Built-in Math functions, Number Formats, Strings, Quotes, print () Function, Assigning Values to Names and Changing Data Through Names, Copying Data, Tuples-Unchanging Sequences of Data, Lists Changeable Sequences of Data; Dictionaries - Groupings of Data Indexed by Name, Special String Substitution Using Dictionaries, Arrays, Treating a String Like a List, Special Types, Ranges of Sequences, Working with Sets, Arrays.

Unit-III

03 Hrs.

Decision Making and Functions: If statement, if-elif-else, Repetition using while loop, for loop, break statement, Handling Errors- try: statement, except: statement, Functions-Grouping Code under a Name, defining a Function, function in the function, Checking and Setting Your Parameters, Calling Functions from within Other Functions, Functions Inside of Functions, Layers of Functions.

Unit-IV

04 Hrs.

Object Oriented Programming using Python Programming: Creating a Class, Self Variables, Constructors, Types of Methods, Inner Classes, Constructors in Inheritance, Polymorphism, Interfaces in Python. Exceptions Handling: Errors in a Python Program, Exceptions, Exception Handling, Types of Exceptions.

Unit-V

02 Hrs.

Advanced Python Libraries: Introduction to Objects and Functions of:

1. Numpy - core library for scientific computing.
2. Pandas - fast, powerful, flexible and easy to use open source data analysis and manipulation tool.
3. Matplotlib - comprehensive library for creating static, animated, and interactive visualizations.
4. SciPy - ecosystem of open-source software for mathematics, science, and engineering.

Python Programming Language Laboratory (ESEE3060L)

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Installing python and setting up environment. Simple statements like printing the names, numbers, mathematical calculations, etc.
2. Write a program to demonstrate different number data types in Python.
3. Write a program to perform different Arithmetic Operations on numbers in Python.
4. Write a program to create, concatenate and print a string and accessing sub-string from a given string.
5. Write a program to create, append, and remove lists in python.
6. Write a program to demonstrate working with tuples in python.
7. Write a program to demonstrate working with dictionaries in python.
8. Write a python program to find largest of three numbers.
9. Write a python program to convert temperatures to and from Celsius, Fahrenheit.
10. Write a python script that prints prime numbers less than 20.
11. Write a python program using numpy to sort the elements in the given array.
12. Write a Pandas program to create and display a DataFrame from a specified dictionary data which has the index labels.
13. Write a Python program to draw line charts of the given data using Matplotlib.
14. Introduction of Python Electrical Machine Library (PYLEECAN).
15. Introduction of Python Linear Circuit Analysis (lcapy).
16. Introduction of Python Control System Library.
17. Data Analysis of Household Power Consumption.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

The Oral/Practical examination will be based on the entire syllabus, including the experiments performed during laboratory sessions.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: III
Semester Project -I (PJEE3070L)		

Course Objectives: Students are expected to design, simulate/implement a project based on the knowledge acquired from current semester subjects.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Analyze a survey of several available literatures in the preferred field of study.	L4	Analyze
CO2	Describe various/alternate approaches to complete a project.	L2	Understand
CO3	Apply a collaborative project environment by interacting and dividing project work among team members.	L3	Apply
CO4	Use technical communication skills to present project work in the form of a technical report/paper.	L3	Apply
CO5	Apply teamwork and project management skills to plan, execute, and manage the research study.	L3	Apply

Semester Project -I (PJEE3070L)

Course Contents

Semester Project:

The purpose of introducing semester project at second year level is to provide exposure to students with a variety of projects based on the knowledge acquired from the semester subjects. This activity is supposed to enrich their academic experience and bring enough maturity in student while selecting the project. Students should take this as an opportunity to develop skills in implementation, presentation and discussion of technical ideas/topics. Therefore, proper attention shall be paid to the content of semester project report which is being submitted in partial fulfilment of the requirements of the Second Year and it is imperative that a standard format be prescribed for the report.

Each student shall work on project approved by departmental committee approved by the Head of Department, a group of 03 to 05 students (max allowed: 5 students in extraordinary cases, subject to the approval of the department committee and the Head of the department) shall be allotted for each Semester Project. Each group shall submit at least 3 topics for the Semester Project. The departmental committee shall finalize one topic for every group. Semester Project Title or Theme should be based on knowledge acquired during semester. The project work shall involve sufficient work so that students get acquainted with different aspects of knowledge acquired from semester subjects.

Student is expected to:

- Select appropriate project title based on acquired knowledge from current semester subjects.
- Maintain Log Book of weekly work done (please see attached log book format).
- Report weekly to the project guide along with log book.

Assessment Criteria:

- At the end of the semester, after conformation by the project guide, each project group will submit project completion report in prescribed format for assessment to the departmental committee (including project guide)
- Assessment of the project (at the end of the semester) will be done by the departmental committee (including project guide)

Prescribed project report guidelines:

Size of report shall be of minimum 25 pages. Project Report should include appropriate content for:

- Introduction
- Literature Survey
- Related Theory

- Implementation details
- Project Outcomes
- Conclusion
- References

Assessment criteria for the departmental committee (including project guide) for Continuous Assessment:

Guide will monitor weekly progress and marks allocation will be as per Table 2.

Assessment criteria for the departmental committee (including project guide) for End Semester Exam:

Departmental committee (including project guide) will evaluate project as per Table 3.

Each group shall present/publish a paper based on the semester project in reputed/peer reviewed Conference/Journal/TechFest/Magazine/ before the end of the semester.

Table 1: Log Book Format

S. N.	Week (Start Date : End Date)	Work Done	Sign of Guide	Sign of Coordinator

Table 2: Continuous Assessment Sheet

S. N.	Exam Seat No	Name of Student	Student Attendance (5)	Log Book Maintain (5)	Literature Review (5)	Depth of Understanding (5)	Report (5)	Total (25)

Table 3: Evaluation Sheet

S. N.	Exam Seat No	Name of Student	Project Selection (5)	Design / Simulation / Logic (5)	PCB / Hardware / Programming (5)	Result Verification (5)	Presentation (5)	Total (25)

Course Objectives

1. To provide basic information about Indian constitution.
2. To identify individual role and ethical responsibility towards society.
3. To understand human rights and its implications.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the historical background, philosophy, and salient features of the Indian Constitution.	L2	Understand
CO2	Interpret the fundamental rights, duties, and directive principles enshrined in the Constitution for responsible citizenship.	L2	Understand
CO3	Describe the structure, roles, and functions of the legislative, executive, and judiciary branches of government.	L2	Understand
CO4	Analyze the federal structure, center-state relations, and constitutional provisions for governance and emergency powers.	L4	Analyze
CO5	Apply constitutional principles to contemporary socio-political and legal issues, fostering ethical and democratic values.	L3	Apply

Constitution of India (MCEE3080T)

Course Contents

Unit-I 02 Hrs.

Introduction to the Constitution of India: The Making of the Constitution and Salient features of the Constitution. Preamble to the Indian Constitution Fundamental Rights and its limitations.

Unit-II 03 Hrs.

Directive Principles of State Policy: Relevance of Directive Principles State Policy Fundamental Duties. Union Executives – President, Prime Minister Parliament Supreme Court of India.

Unit-III 03 Hrs.

State Executives: Governor, Chief Minister, State Legislature High Court of State. Electoral Process in India, Amendment Procedures, 42nd, 44th, 74th, 76th, 86th and 91st Amendments.

Unit-IV 03 Hrs.

Special Provisions: For SC and ST Special Provision for Women, Children and Backward Classes Emergency Provisions. Human Rights: Meaning and Definitions, Legislation Specific Themes in Human Rights- Working of National Human Rights Commission in India Powers and functions of Municipalities, Panchayats and Co – Operative Societies..

Unit-V 03 Hrs.

Scope and Aims of Engineering Ethics: Responsibility of Engineers Impediments to Responsibility. Risks, Safety and liability of Engineers, Honesty, Integrity and Reliability in Engineering.

Text Books

Program: Electrical Engineering	S. Y. B. Tech.	Semester: IV
Engineering Mathematics - IV (BSEE4010T)		

Course Objectives

1. Random variables and random process.
2. The design of the systems which involves randomness using mathematical analysis and computer simulations.
3. Concepts of linear algebra.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Apply theory of probability in identifying and solving relevant problems.	L3	Apply
CO2	Differentiate random variables through the use of cumulative distribution function (CDF), Probability density function (PDF), Probability mass function (PMF) as well as joint, marginal and conditional CDF, PDF and PMF.	L2	Understand
CO3	Determine the response of Linear time invariant System to Random Process.	L3	Apply
CO4	Explain the theory of linear algebra and its application to Electrical Engineering.	L2	Understand

Engineering Mathematics - IV (BSEE4010T)

Course Contents

Unit-I

10 Hrs.

Introduction to Probability and Random Variable : Sample space, events, set operations, the notion and axioms of probability Conditional probability, Joint probability, Bayes' rule, Independence of events. Definition of Random Variable. Continuous random variables, probability density function, probability distribution function Uniform, Exponential and Gaussian continuous random variables and distributions.

Unit-II

10 Hrs.

Operations on One and Multiple Random Variable: Functions of a random variable and their distribution and density functions, Expectation, Variance and Moments of random Variable. Pairs of random variables, Joint CDF, Joint PDF, Independence, Conditional CDF and PDF, Conditional Expectation One function of two random variables, two functions of two random variables; joint moments, joint characteristic function, covariance and correlation-independent, uncorrelated and orthogonal random variables. Central limit theorem and its significance.

Unit-III

05 Hrs.

Random Process: Random process: Definition, realizations, sample paths, discrete and continuous time processes. Probabilistic structure of a Random process: mean, correlation and covariance, functions, stationarity of random process. Ergodicity and WSS.

Unit-IV

10 Hrs.

Matrix Theory: Eigenvalues and Eigenvectors, properties of Eigenvalues and Eigenvectors. Cayley - Hamilton theorem, Examples based on verification of Cayley-Hamilton theorem. Similarity of matrices, Diagonalisation of matrices. Function of square matrix. Quadratic forms over real field, Reduction of quadratic form to a diagonal canonical form, Rank, index and signature of quadratic form, Sylvester's law of inertia, Value-class of quadratic form of definite, Semi-definite and indefinite.

Unit-V

07 Hrs.

Linear Algebra: Vector Spaces, Subspaces, Span, Basis, Dimension, Rank. Linear transformations, Givens and Householder transformations, Application of SVD to principal component analysis.

Text Books

1. T. Veerarajan, "Probability, Statistics and Random Processes", McGraw Hill.
2. Papoulis and S. Unnikrishnan Pillai, "Probability, Random Variables and Stochastic Processes", Fourth Edition, McGraw Hill.

2. Dimitris. G. Manolakis, Vinay Ingale, and Stephen M. Kogon, "Statistical and Adaptive Signal Processing", Artech House, Inc., 2005.
3. Todd K. Moon and Wynn C. Stirling, "Mathematical Methods and Algorithms for Signal Processing", Pearson Education, Inc., 2000.
4. Seymour Lipschutz and Marc Lipson Linear Algebra Schaum's outline series, McGraw Hill Publication.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: IV
Electrical Machine-I (PCEE4020T)		
Electrical Machine-I Laboratory (PCEE4020L)		

Prerequisite: Magnetic circuit, mutually induced EMF, Dynamically induced EMF, Direction of magnetic field in current carrying conductor, Flemings LHR and RHR, Electromechanical energy conversion and Single phase transformer.

Course Objectives

1. To understand energy conversion process.
2. To understand basic principles operation, performance and control of dc machine and transformer.
3. To understand selection of machines for specific applications.
4. To understand test & analysis the performance of machine.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the energy conversion process.	L2	Understand
CO2	Apply engineering concepts in working and characteristics of DC machines.	L3	Apply
CO3	Analyze the performance of DC machines.	L4	Analyze
CO4	Apply engineering concepts in construction and working of Transformers.	L3	Apply
CO5	Apply selection of appropriate machine for different applications.	L4	Analyze

Electrical Machine-I (PCEE4020T)

Course Contents

Unit-I

07 Hrs.

Electromechanical Energy Conversion: Energy in a magnetic systems, field energy and mechanical force, energy in single and multiple excited magnetic systems, Physical concept of torque production, electromagnetic torque and reluctance torque, concept of general terms pertaining to rotating machines, electrical and mechanical degree, Pole pitch, Coil. Dynamic equations of electromechanical systems and analytical techniques.

Unit-II

07 Hrs.

DC Generator : Constructional feature of DC machines, type of DC Generator, emf equation of DC generator ,voltage built up in DC shunt generator, critical field resistance, losses and efficiency of DC generator, armature reaction ,characteristic of DC generator,demagnetizing and cross magnetizing,compensating winding, commutation process and methods to improve commutation.

Unit-III

07 Hrs.

DC Motor : Type of DC motors, concept of back emf, general armature torque equation, power stages, losses and efficiency, characteristic of DC motors, speed control of DC motors, necessity and types of starters, solid state starters. Applications of various DC machines, troubleshooting of various DC machines, selection procedure, study of relevant Indian Standard Specifications.

Unit-IV

07 Hrs.

Single Phase Transformers: Principle, construction and operation of single-phase transformers, corrugated core transformer,toroidal core Transformer , Cargo core and amorphous core transformers, comparison of the identical rating transformer with Cargo core and amorphous core transformer, energy efficiency in line with cargo and amorphous transformers, mineral oil and Ester oil difference in transformers. Phasor diagram, equivalent circuit, voltage regulation, losses and efficiency, maximum efficiency,testing of transformer - open circuit and short circuit tests, polarity test.

Unit-V

07 Hrs.

Three Phase Transformers: Three-phase transformer construction, three phase unit transformer and bank of single phase transformer, vector groups, Open Delta connection or V-V connections, Scott connection, parallel operation and load sharing. Applications of various transformers, Pulse transformer, Audio frequency transformer, Grounding transformer, Losses in a distribution transformer. Distribution Transformer requirements as per Indian Standard.

Unit-VI

07 Hrs.

Special Machines and Applications: Brushless DC Motor (BLDC): Constructional details, working principle, comparison of BLDC motor with conventional DC motor, characteristics and applications, advantages and disadvantages. Permanent Magnet DC Motor (PMDC): Constructional details, working principle, characteristics and applications, advantages and disadvantages. Stepper Motor: Constructional details, working principle, types, characteristics and applications, advantages and disadvantages. Universal Motor, Switched Reluctance Motor.

Electrical Machine-I Laboratory (PCEE4020L)

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Familiarization of the electrical machine laboratory apparatus.
2. Speed Control of DC motor by field resistance control.
3. Speed Control of DC motor by Armature Resistance Control.
4. To study Magnetization Characteristics of D C generator.
5. To study External, Internal Characteristics of D C Generator.
6. To study External, Internal Characteristics of D C Generator.
7. Determination of performance characteristic of DC series motor by direct load.
8. Determination of Transformer equivalent circuit from Open Circuit and Short Circuit Test.
9. Determination of performance of single phase transformer by direct load test.
10. Polarity and Ratio test on single phase transformer.
11. Parallel operation of two single phase transformer.
12. Study of phasor and vector group of three phase transformer.
13. Scott connection of two single phase transformer.
14. To study DC Machine characteristics using MATLAB.
15. Load test on single phase transformer using MATLAB.
16. Speed control of BLDC motor using Ardiuno.
17. Direction control of stepper motor using Ardiuno.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Practical examination will be based on the entire syllabus including, the practicals performed during laboratory sessions.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: IV
Power System Transmission and Distribution (PCEE4030T)		
Power System Transmission and Distribution Laboratory (PCEE4030L)		

Prerequisite:

- Knowledge of Basic Electrical Energy.
- Knowledge of Electrical Energy Generation System.
- Present scenario of power system.

Course Objectives

1. To introduce students to the basic structure and requirements of any electric power supply system.
2. To develop knowledge about nature of power systems engineering and the profession.
3. To develop an understanding of components in a power system and to understand the basic principles involved in these components.
4. To explore analysis and design principles for the complete power system.
5. To Able to erect Transmission Line.
6. To Understand the Challenges of using sources of energy efficiently and effectively.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Implement modeling techniques to represent power system components.	L3	Apply
CO2	Use software development tools to simulate and analyze the system.	L3	Apply
CO3	Analyze corrective measure for immediate as well as long term solution to the system problems.	L4	Analyze
CO4	Explain the knowledge of Generation, Transmission, and Distribution of power.	L2	Understand
CO5	Design transmission line model.	L6	Create
CO6	Recognize the need to continuously follow the advancements in technology and incorporating them in the present system to improve efficiency.	L2	Understand

Power System Transmission and Distribution (PCEE4030T) Course Contents

Unit-I

04 Hrs.

Fundamentals of Power Systems: Introduction to modern power system: Generation, Transmission and sub-transmission, Distribution, Loads. Growth of power system in India, Present Scenario Indian power industry, GRID formation, concept of National GRID, complex power, power factor correction methods.

Unit-II

07 Hrs.

Transmission System: Electric supply system, A.C power supply scheme, D.C transmission scheme, Comparison of AC and DC transmission system, advantages of A.C. transmission system, Comparison of various transmission system (Two wire dc system, Single phase two wire A.C system, Single phase three wire system, three phase three wire system, Three phase four wire system), Economic choice of transmission voltage, requirements of satisfactory electric supply.

Unit-III

07 Hrs.

Mechanical Design of Overhead Transmission Line : Main components of overhead line, conductor materials, line supports, Type of insulators, potential distribution over suspension insulator string, string efficiency, methods of improving string efficiency. Phenomenon of corona, factors affecting corona, advantages and disadvantages of corona, methods of reducing corona, Sag in overhead line, calculation of sag, Effects of wind and ice coating on transmission line.

Unit-IV

08 Hrs.

Transmission Line Parameters: Resistance, Inductance: Definition, Inductance due to internal flux of two wire single phase line of composite conductor line, GMD and GMR, Inductance of three phase line with equal and unequal spacing, vertical spacing. Computation of capacitance of single phase, three phase transmission lines with and without symmetrical spacing for conductors. Skin effect, Proximity Effect, Ferranti effect.

Unit-V

08 Hrs.

Transmission Line Modeling and Performance: Single line diagram and impedance or reactance diagram, per unit system, per unit methods of representation of system and its components such as transformers (1 phase/3 phase) Two winding / Three winding) Synchronous machines (motors and generators) load. Performance of Transmission Lines, Determination of generalized ABCD constants, Power Circle Diagrams, series and shunt compensation, surge impedance loading.

Distribution System and Underground Cables: Distribution System Classification of distribution system, Types of distribution AC and DC, Requirements of distribution system, Design consideration of distribution system, AC distribution types, and Voltage drop calculations in different distribution system, Tariff, desirable characteristics of tariff, types of tariff. Introductions to Underground cables and its Classification, Types of Cable and its Constructions.

List of Laboratory Experiments

Suggested Experiments: (Any 10)

Group-A:

1. To Determine the Inductance for symmetrical and unsymmetrical configuration of 3 phase transmission line by using Software.
2. To Determine the Capacitance for symmetrical and unsymmetrical configuration of 3 phase transmission line by using Software.
3. To verify the effect of VAR Compensation on receiving end profile of transmission line using capacitor bank.
4. Study of line conductors and insulators of OHT system.
5. Analysis of surge impedance loading of transmission line.
6. To Determine regulation and transmission efficiency for short and medium transmission line.
7. To Determine ABCD parameters of short, medium and long transmission lines.
8. Calculation of different parameters by power circle diagram.

Group-B:

1. To Study Various Types of Distribution systems
2. To Design substation models.
3. Case study on different types of Tariff.
4. To Determine Voltage regulation, efficiency and Power factor of long transmission line by using MATLAB Software.
5. To Determine sag of transmission line by using MATLAB Software.
6. Measurement of insulation resistance of power cables.
7. Transmission line fault analysis (Line to ground) by using MATLAB software.
8. To study control panel and metering equipment of Industries

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Practical examination will be based on the entire syllabus including, the practicals performed during laboratory sessions.

Text Books

Program: Electrical Engineering	S. Y. B. Tech.	Semester: IV
Microcontroller and Applications (PCEE4040T)		
Microcontroller and Applications Laboratory (PCEE4040L)		

Prerequisite: Concepts of number systems. Concepts of combinational and sequential logic circuits.

Course Objectives

1. To study the Architecture of 8051 micro-controller.
2. To study the addressing modes and instruction set of 8051.
3. To introduce the need and use of Interrupt structure of 8051.
4. To develop skill in simple applications development with programming 8051.
5. To introduce Arduino with commonly used peripheral and interfacing.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Describe the architecture of various micro controller.	L2	Understand
CO2	Write program for 8051 in assembly language and embedded C.	L3	Apply
CO3	Explain the timers and interrupts of a microcontroller.	L2	Understand
CO4	Analyze the architecture of advanced microprocessor.	L4	Analyze
CO5	Apply to interface the IO devices to microcontroller and Arduino.	L3	Apply

Microcontroller and Applications (PCEE4040T)

Course Contents

Unit-I

07 Hrs.

8051 Microcontroller Architecture: Microprocessor vs Microcontroller, Overview of the microcontroller Family, Intel 8051 Functional block diagram, Functions of pins of 8051, Memory organization of 8051, Stack and operation of stack, Stack pointer, Overview of special function registers, Subroutines

Unit-II

07 Hrs.

Instruction set and Programming: Instruction set of 8051 microcontroller, Assembly Language Programs based on instructions, Addressing modes of 8051

Unit-III

07 Hrs.

8051 Timers, and Programming: Data types in C, 8051 Programming in embedded C, 8051 ports and programming in embedded C. Time delay programming in embedded C. 8051 Timers and counters and its programming in embedded C

Unit-IV

07 Hrs.

Interrupts Programming and Advanced Microprocessor: 8051 interrupts, Interrupts Programming in embedded C, 8051 Serial port Structure and its programming in embedded C. Introduction to Architecture of PIC Microcontroller, ARM Processor, ATMEGA Processor.

Unit-V

07 Hrs.

8051 Interfacing: Interfacing of Switch, LED, with 8051 and its programming in embedded C, Interfacing and programming of LCD, ADC, DAC, Stepper motor and Relay with 8051 in embedded C.

Unit-VI

07 Hrs.

Arduino and its Programming: Introduction to the Arduino, Arduino IDE, Arduino Shields, Arduino Programs, Interfacing Arduino with Analog devices, Interrupts, Communication Device: Serial port, Applications: Interfacing of motor, LCD.

Microcontroller and Applications Laboratory (PCEE4040L)

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Write an Assembly language program to perform 8 bit arithmetic operations Addition and Subtraction
2. Write an Assembly language program to find larger number from given data bytes stored in memory locations
3. Write an Assembly language program to find square of number using Look up table concept
4. Write an Assembly language program to perform 8 bit logical AND, OR operations
5. Write an Assembly language program to arrange an data in ascending or descending order
6. Write an Assembly language program to transfer data from source to destination locations of memory
7. Write a program blinking of LED using Proteus VSM simulation software
8. Design of temperature meter using Arduino (Innovative)
9. Design of DC voltmeter using Arduino (Innovative)
10. Implementation of Serial Communication by using 8051 serial ports
11. Write an embedded C program for interfacing of 8 bit ADC 0809 with 8051 Microcontroller
12. Write an embedded C program for interfacing of 8 bit DAC 0808 with 8051 to generate various waveforms
13. Write an embedded C program for stepper motor control by 8051 Microcontroller
14. Write an embedded C program for interfacing of the relay with 8051
15. Write an embedded C program for LCD interfacing with 8051 microcontroller
16. Write a program for switch and LED interfacing using Proteus VSM simulation software
17. Design of ultrasonic distance meter using Arduino (Innovative)
18. Design of digital ohmmeter using Arduino (Innovative)

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Practical examination will be based on the entire syllabus including, the practicals performed during laboratory sessions.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: IV
Signals and Systems (PCEE4050T))		

Prerequisite: First Year Physics, Engineering Mathematics-III. .

Course Objectives

1. This course aims to introduce students the basic features of transistor amplifier.
2. This course intends to provide basic knowledge of theoretical structure, formal representation, computational methods, notation, and vocabulary of linear models.
3. It is aimed to impart skills to perform signal analysis with reference to spectrum analysis of deterministic signals.
4. Imparting basic knowledge of signals and systems analysis.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Describe the mathematical principles of continuous time, discrete-time systems and applications of signal processing techniques.	L2	Understand
CO2	Calculate the response of linear systems in time domain using various tools such as convolution, Laplace transform, Z transform.	L3	Apply
CO3	Analyze frequency domain behavior of linear systems using Fourier transform techniques.	L4	Analyze

Signals and Systems (PCEE4050T)

Course Contents

Unit-I

07 Hrs.

Introduction to Signals and Systems: Continuous and discrete time representation of elementary signals, operations on signals (shift, invert, scale) Classification of signals: Continuous and discrete time, deterministic and non-deterministic, periodic and aperiodic, symmetric (even) and asymmetric (odd) Introduction to systems: Definition, Classification of systems: Static and dynamic, time variant and time invariant, linear and nonlinear, causal and non-causal, stable and unstable systems, Invertible and Non-Invertible Systems

Unit-II

07 Hrs.

Analysis of Continuous and Discrete Time Systems: Representation of systems using differential equation, Impulse response and convolution integral, properties of convolution, signal responses to CT-LTI system, system stability Impulse, step and, system stability
Response of Discrete Time-LTI System: Representation of systems using difference equation, Impulse response characterization and convolution sum, Properties of convolution summation, Impulse response of DT-LTI system and its properties, step response, system stability

Unit-III

07 Hrs.

Fourier Analysis of Continuous Time Signal: Trigonometric Fourier series, Compact Trigonometric Fourier series, Exponential form, Dirichlet Conditions, Frequency domain representation of periodic signals, Fourier Transform representation of aperiodic signals, Properties of CFT duality, time reversal, Convolution – time and frequency domain, etc.

Unit-IV

07 Hrs.

LT Analysis of Signals and System : Definition, Properties, Solution of differential equation. Transfer function, Poles and Zeroes, System analysis using Laplace Transform.

Unit-V

07 Hrs.

Fourier Domain Analysis of Discrete Time Signal: Sampling theorem, sampling of continuous time signals, Nyquist Criterion, concept of aliasing, Discrete time Fourier Transform, Properties of DTFT: time reversal, Linear Convolution time and frequency domain, conjugate symmetry.

Unit-VI

07 Hrs.

Transform Analysis of Discrete Signals and System: Need of Z-Transform, definition of unilateral and bilateral Z Transform, Z- Transform of finite and infinite duration sequences, properties, Inverse Z-Transform, relation between discrete time Fourier Transform and Z-Transform, Z Transform of standard signals, ROC for ZT, plotting poles and zeros of transfer function, Analysis of discrete time LTI sys-

tems using Z-Transform: Transfer Function, causality and stability of systems, relation between Laplace Transform and Z-Transform.

2. Simon Haykin, Barry Van Veen, "Signals and systems", Wiley, 2nd Edition, 2007.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: IV
Numerical Methods and Computer Programming Laboratory (ESEE4060L)		

Prerequisite:

1. Basic Knowledge of types of matrices and its properties, mathematical operations.
2. Basic knowledge of Maxima and Minima of single variable function, Partial derivatives, solutions of systems of solutions
3. Basic knowledge of derivation, integration, solution of differential equation.

Course Objectives

1. Describe basic functions and advantages of different Numerical Methods
2. Explain basic concepts of Numerical Methods
3. Solve introductory engineering problems using Numerical Methods
4. Correlate numerical results and approximations with field problems

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Describe functions and advantages of different numerical methods	L2	Understand
CO2	Explain basic concepts of numerical approximations	L2	Understand
CO3	Solve introductory engineering problems	L3	Apply
CO4	Correlate numerical results and approximations with actual field results	L4	Analyze

Numerical Methods and Computer Programming Laboratory (ESEE4060L) Course Contents

Unit-I 02 Hrs.

Linear Algebra and Systems of Linear Equations: Basics of Linear Algebra, Linear Transformations, Systems of Linear Equation, Solve Systems of Linear Equations in Python, Matrix Inversion.

Unit-II 02 Hrs.

Least Squares Regression: Least Squares Regression Problem Statement, Least Squares Regression Derivation (Linear Algebra), Least Squares Regression in Python.

Unit-III 02 Hrs.

Interpolation: Interpolation Problem Statement, Linear Interpolation, Cubic Spline Interpolation, Lagrange Polynomial Interpolation, Newtons Polynomial Interpolation.

Unit-IV 02 Hrs.

Series: Expressing Functions with Taylor Series, Approximations with Taylor Series.

Unit-V 02 Hrs.

Root Finding: Root Finding Problem Statement, Tolerance, Bisection Method, Newton-Raphson Method, Root Finding in Python.

Unit-VI 02 Hrs.

Numerical Differentiation: Numerical Differentiation Problem Statement, Finite Difference Approximating Derivatives, Approximating of Higher Order Derivatives, Numerical Differentiation with Noise.

Unit-VII 01 Hrs.

Numerical Integration: Numerical Integration Problem Statement, Trapezoid Rule, Simpsons Rule, Computing Integrals in Python.

Unit-VIII 01 Hrs.

Ordinary Differential Equations (ODEs): Initial-Value Problems, The Euler Method, Predictor-Corrector Methods, Runge Kutta Method, Python ODE Solvers (IVP).

Numerical Methods and Computer Programming Laboratory (ESEE4060L)

List of Laboratory Experiments

Any 10 experiments to be performed from Group A- minimum 5 practicals and Group B- minimum Five practicals

Suggested Experiments: (Any 8)

Group A (Python Programs)

1. Write a program for finding roots of $f(x)$ by Gauss Elimination Method using Python
2. Write a program for finding roots of $f(x)$ by Bisection Method using Python
3. Write a program for finding roots of $f(x)$ by False Position Method using Python
4. Write a program for finding roots of $f(x)$ by Secant Method using Python
5. To generate forward difference table using Python
6. To generate reverse difference table using Python
7. To implement Linear Regression Method using Least Square Method to find curve of best fit of type $y=a+bx$ using Python
8. To implements least square method to fit curve of type $y = abx$ using Python

Group B (MATLAB Programs)

1. Write a program for finding roots of $f(x)$ by Crouts Method using MATLAB
2. Write a program for finding roots of $f(x)$ by Gauss Siedel Method using MATLAB
3. Write a program for solving numerical integration by trapezoidal rule using MATLAB
4. Write a program for solving numerical integration by Simpsons One-Third Rule using MATLAB
5. Write a program for solving numerical integration by Simpsons Three-Eighth Rule using MATLAB
6. Write a program for solving ordinary differential equation by Runge Kutta Method using MATLAB
7. Design and Implementation of MATLAB/SIMULINK model of Linear equations in Electrical Circuit Analysis
8. Design and Implementation of MATLAB/SIMULINK model of Load Flow analysis using Newton Raphson method

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Practical examination will be based on the entire syllabus including, the practicals performed during laboratory sessions.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: IV
Universal Human Values (HMEE4070T)		

Course Objectives

1. Development of a holistic perspective based on self-exploration about themselves (human being), family, society, and nature/existence.
2. Understanding (or developing clarity) of the harmony in the human being, family, society, and nature/existence
3. Strengthening of self-reflection.
4. Development of commitment and courage to act.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Identify the need, relevance, and role of universal human values in personal, academic, and professional life.	L2	Understand
CO2	Demonstrate understanding of self-exploration, harmony in human relationships, and ethical conduct in daily interactions.	L3	Apply
CO3	Apply principles of trust, respect, and responsibility to foster sustainable and compassionate social environments.	L3	Apply
CO4	Analyze the interdependence between individual values, societal well-being, and ecological balance.	L4	Analyze
CO5	Use human values into decision-making processes for holistic development and responsible engineering practice.	L3	Apply

Universal Human Values (HMEE4070T)

Course Contents

Unit-I

04 Hrs.

Introduction: Need, Basic Guidelines, Content and Process for Value Education

Purpose and motivation for the course. Self-Exploration–what is it? - Its content and process; ‘Natural Acceptance’ and Experiential Validation- as the process for self-exploration.

Continuous Happiness and Prosperity- A look at basic Human Aspirations. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority.

Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario. Method to fulfil the above human aspirations: understanding and living in harmony at various levels

Unit-II

06 Hrs.

Understanding Harmony in the Human Being - Harmony in Myself!

Understanding human being as a co-existence of the sentient ‘I’ and the material ‘Body’. Understanding the needs of Self (‘I’) and ‘Body’ - happiness and physical facility. Understanding the Body as an instrument of ‘I’ (I am being the doer, seer and enjoyer).

Understanding the characteristics and activities of ‘I’ and harmony in ‘I’. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail. Programs to ensure Sanyam and Health..

Unit-III

06 Hrs.

Understanding Harmony in the Family and Society: Harmony in Human-Human Relationship

Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship.

Understanding the meaning of Trust; Difference between intention and competence.

Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship.

Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals.

Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family

Unit-IV

06 Hrs.

Understanding Harmony in the Nature and Existence: Whole existence as Coexistence

Understanding the harmony in the Nature 19. Interconnectedness and mutual fulfilment among the four orders of nature recyclability and self-regulation in nature.

Understanding Existence as Co-existence of mutually interacting units in all pervasive space. Holistic perception of harmony at all levels of existence

Unit-V

06 Hrs.

Implications of the above Holistic Understanding of Harmony on Professional Ethics

Natural acceptance of human values. Definitiveness of Ethical Human Conduct.

Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order.

Competence in professional ethics:.

Program: Electrical Engineering	S. Y. B. Tech.	Semester: IV
Semester Project -II (PJEE4080L)		

Course Objectives Students are expected to design, simulate/implement a project based on the knowledge acquired from current semester subjects.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Analyze a survey of several available literatures in the preferred field of study.	L4	Analyze
CO2	Describe various/alternate approaches to complete a project.	L2	Understand
CO3	Apply a collaborative project environment by interacting and dividing project work among team members.	L3	Apply
CO4	Use technical communication skills to present project work in the form of a technical report/paper.	L3	Apply
CO5	Apply teamwork and project management skills to plan, execute, and manage the research study.	L3	Apply

Semester Project -II (PJEE4080L)

Course Contents

Semester Project:

The purpose of introducing semester project at second year level is to provide exposure to students with a variety of projects based on the knowledge acquired from the semester subjects. This activity is supposed to enrich their academic experience and bring enough maturity in student while selecting the project. Students should take this as an opportunity to develop skills in implementation, presentation and discussion of technical ideas/topics. Therefore, proper attention shall be paid to the content of semester project report which is being submitted in partial fulfilment of the requirements of the Second Year and it is imperative that a standard format be prescribed for the report.

Each student shall work on project approved by departmental committee approved by the Head of Department, a group of 03 to 05 students (max allowed: 5 students in extraordinary cases, subject to the approval of the department committee and the Head of the department) shall be allotted for each Semester Project. Each group shall submit at least 3 topics for the Semester Project. The departmental committee shall finalize one topic for every group. Semester Project Title or Theme should be based on knowledge acquired during semester. The project work shall involve sufficient work so that students get acquainted with different aspects of knowledge acquired from semester subjects.

Student is expected to:

- Select appropriate project title based on acquired knowledge from current semester subjects.
- Maintain Log Book of weekly work done (please see attached log book format).
- Report weekly to the project guide along with log book.

Assessment Criteria:

- At the end of the semester, after conformation by the project guide, each project group will submit project completion report in prescribed format for assessment to the departmental committee (including project guide)
- Assessment of the project (at the end of the semester) will be done by the departmental committee (including project guide)

Prescribed project report guidelines:

Size of report shall be of minimum 25 pages. Project Report should include appropriate content for:

- Introduction
- Literature Survey
- Related Theory

- Implementation details
- Project Outcomes
- Conclusion
- References

Assessment criteria for the departmental committee (including project guide) for Continuous Assessment:

Guide will monitor weekly progress and marks allocation will be as per Table 2.

Assessment criteria for the departmental committee (including project guide) for End Semester Exam:

Departmental committee (including project guide) will evaluate project as per Table 3.

Each group shall present/publish a paper based on the semester project in reputed/peer reviewed Conference/Journal/TechFest/Magazine/ before the end of the semester.

Table 1: Log Book Format

S. N.	Week (Start Date : End Date)	Work Done	Sign of Guide	Sign of Coordinator

Table 2: Continuous Assessment Sheet

Program: Electrical Engineering	S. Y. B. Tech.	Semester: IV
Employability Skill Development Program-I (HMEE4090L)		

Prerequisite: Basic Mathematics, Basic knowledge of C programming.

Course Objectives

1. To enhance the problem solving skills.
2. To improve the basic mathematical skills for solving real life examples.
3. Able to implement the algorithms and draw flowcharts for solving Mathematical and Engineering problems.
4. Demonstrate an understanding of computer programming language concepts.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the basic concepts of Quantitative Ability, including profit, loss, time, work, and geometry.	L2	Understand
CO2	Demonstrate the concepts of Quantitative Ability for problem solving.	L3	Apply
CO3	Demonstrate the concept of Variables and Functions through examples.	L3	Apply
CO4	Demonstrate the concept of Multithreading and String Handling.	L3	Apply
CO5	Explain the fundamentals of Object-Oriented Programming.	L2	Understand
CO6	Describe the concepts of Distributed Database.	L2	Understand

Employability Skill Development Program-I (HMEE4090L) Course Contents

Aptitude Quantitative Aptitude : Algebra, Profit and Loss, Average & Allegation / Mixture, Time and Work, Geometry Mensuration, Numbers , Percentage, Permutation and Combination, Probability, Ratios & Proportion, Time and Distance.

Reasoning : Analytical, Puzzles, Blood relationship, Data Interpretation, Data sufficiency

Fundamental of Programming

Variables: Local variables, Global variables, 'global' keyword, Rules of Identities,

Functions : Introduction, Prototype, Classification of functions, No arguments and No return values, With arguments and With return values,

No arguments and With return values : With arguments and No return values, Recursion, Argument type functions, Default arguments functions, Required arguments functions, Keyword arguments functions, Variable arguments function

Operators : Arithmetic Operators, Relational operators, Logical operators, Bitwise operators, Shift operators,

Control Statements : Conditional Control Statements, if, if-else, if-elif-else, nested-if, Loop Control Statements, While, For,

Branching Statements: Break, Continue, pass, return, exit,

Exception Handling: Introduction, The need of exception handling, Getting exceptions, Default exception handler, Handling exception, Try, Except,

Try with multiple except blocks Handling exceptions using Exception class, Finally, block, Releasing resources using Finally block, Raise, Creating a user exception class., Raise exception manually, Exceptions based application

Multithreading : Introduction, Multitasking, Multi tasking v/s Multithreading, threading module, Thread class introduction, Creating thread, The life cycle of a thread, Single-threaded application, Multi-threaded application, Sleep() method. Sleep() v/s run(), Join() v/s Sleep(), Multiple custom threads creation, The execution time of single-threaded application, The execution time of multi-threaded application, Synchronization of threads.

Inner classes Basic syntax of inner class, Advantages of Inner classes, Access class level members of inner classes, Access object level members of inner classes, Local inner classes, Complex inner classes, Accessing data of inner classes.

Regular expressions 're' module, Match(), Search(), find() etc, and actual projects web scrapping

Mail extraction Date extraction, Mobile number extraction, Vehicle number extraction, zoom chat analysis,

Expressions using operators and symbols: Split string into characters, Split string into words, Lambda expressions,

String handling using regex: Introduction to Strings, Indexing and Slicing, Special operators in String

handling, Old style String formatting, String library methods, Quotes and Escape characters in a String representation, String Immutability, Logical programs using Strings

Object Oriented Programming : Introduction to OOPs, Classes, Objects, Structure to OOP application, Contexts of OOP application, Class level members, Object level members, self variable, Constructor and Initialization of object.

Access modifiers : Private, Protected, Public, Program codes. **Encapsulation** Rules, Implementation, Abstraction, Polymorphism

Inheritance Introduction, Types of Inheritance, Single inheritance, Multi-Level inheritance, Method overriding, Object initialization using constructor, Multiple inheritances, Hierarchical inheritance, Method overriding in Multi level inheritance.
