

Shirpur Education Society's

R. C. Patel Institute of Technology, Shirpur
(An Autonomous Institute)

Course Structure

Third Year B. Tech. (Electrical Engineering)

with effect from Academic Year 2022-23

Shahada Road, Near Nimzari Naka, Shirpur, Maharashtra 425405
Ph. No.: 02563 259 802, web: www.rcpit.ac.in

Vision of the Institute

To become a leading Institute in Technical education fostering innovation, research, ethical values, and sustainable development for the betterment of society.

Mission of the Institute

To impart high quality Technical Education through:

- **M1:** Innovative and Interactive learning process and high quality, globally recognized instructional programs.
- **M2:** Fostering a collaborative scientific temper among students with ethical responsibility towards the society.
- **M3:** Preparing students from diverse backgrounds to have aptitude for employment, entrepreneurship and research with a spirit of professionalism.
- **M4:** To contribute to the nation's sustainable development.

Vision of the Electrical Engineering Department

To produce competent Electrical Engineers committed to innovation, sustainability and service to society.

Mission of the Electrical Engineering Department

- **M1:** Deliver innovative, interactive learning fostering excellence in Electrical Engineering and emerging technologies.
- **M2:** Cultivate scientific inquiry, ethical responsibility, and interdisciplinary collaboration to address energy, automation, and societal challenges.
- **M3:** Empower diverse students with skills for employment, entrepreneurship, and research, nurturing professionalism and lifelong learning.

Program Educational Objectives

The educational objectives of the Undergraduate Programmes of Electrical Engineering are:

- **PEO1:** Graduates will apply electrical engineering knowledge and innovation to solve complex industrial and societal problems.
- **PEO2:** Graduates will demonstrate ethical leadership and collaborate across disciplines to promote sustainable and inclusive development.
- **PEO3:** Graduates will pursue careers in employment, entrepreneurship, or research, embracing professionalism and lifelong learning.

Third Year B. Tech. Electrical Engineering Semester-V (with effect from 2022-23)													
S. N.	Course Category	Course Code	Course Title	Teaching Scheme			Evaluation Scheme					Credits	
				L	T	P	Continuous Assessment (CA)				ESE	Total	
							TA	Term Test-I (TT-I)	Term Test-II (TT-II)	Best of TT-I and TT-II

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
Electrical Machines-II (PCEE5010T)		
Electrical Machines-II Laboratory (PCEE5010L)		

Prerequisites: Knowledge of Electrical Machine-I.

Course Objectives

1. To introduce the constructional and operational details of cylindrical and salient pole rotor type synchronous machines working in generator and motor modes.
2. To present the procedure for analysis of synchronous generator and synchronous motor during the (a) steady state, (b) transient state (3-phase short-circuit) and (c) unbalanced operating conditions using Phasor diagrams and machine equations.
3. To introduce the methods of synchronization and analysis when alternators are connected to an infinite bus and in parallel with each other.
4. To determine the performance indices of AC series and single-phase motors by experimentation.
5. To study the applications of different machines in industrial, commercial, and social sectors.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Apply basic knowledge of science and engineering to understand electrical machines.	L3	Apply
CO2	Explain the construction, concepts, principles of operation, testing, and applications of synchronous machines, induction motors, and special function motors.	L2	Understand
CO3	Explain the behavior of synchronous machines on infinite bus and analyze data for qualitative and quantitative parameters to determine machine characteristics by performing practicals..	L4	Analyze
CO4	Analyze and perform professional duties in teams involving manufacturing, testing, operation, and maintenance with an emphasis on safety precautions.	L4	Analyze
CO5	Apply knowledge to related technological subjects such as utilization of electrical energy, switchgear, and machine design for economical and sustainable development.	L3	Apply

Electrical Machines-II (PCEE5010T)

Course Contents

Unit-I

08 Hrs.

Synchronous Generator: Principle of generator, construction, excitation system, rotating MMF waves in AC machines, EMF equation, winding factors, alternator on-load. Synchronous reactance and synchronous impedance, armature reaction and its effect under different load power factors, Voltage regulation of non-salient pole alternator.

Unit-II

09 Hrs.

Synchronous Generator Analysis: Two reaction theory for salient pole machines, slip test for finding x_d , x_q . Parallel operation of alternators. Effect of changing mechanical torque and excitation on alternator. Load sharing between two parallel connected alternators. Alternator on an infinite bus, induction generator.

Unit-III

08 Hrs.

Synchronous Motors: Principle of operation of synchronous motor, power development, operation of 3-phase synchronous motor with constant load and variable excitation, operation with constant excitation and variable load, 'V' curves and 'inverted V' curves. Synchronous condenser, phenomenon of hunting and its remedies. Applications of 3-phase synchronous motors.

Unit-IV

09 Hrs.

Polyphase Induction Machines: Construction and principle of operation of squirrel cage and slip ring induction motors. Steady state analysis: torque-speed characteristics, torque-slip characteristics, maximum torque, and starting torque. Power stages, losses and efficiency, methods of starting of slip ring and cage rotor induction motors. Types of starters, circle diagram and computation, double squirrel cage motors, cogging, crawling, speed control of induction motors. Comparison of 3-phase synchronous motor with 3-phase induction motor.

Unit-V

08 Hrs.

Introduction to Special Machines: Single phase induction motor: Construction, double field revolving theory, equivalent circuit and torque-slip characteristics. Types of single-phase IM. Special machines: hysteresis motor, repulsion motor, linear induction motor, AC servomotors, AC series motor.

Electrical Machines-II Laboratory (PCEE5010L)

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Determination of voltage regulation and efficiency of a three-phase alternator by direct load test.
2. Open and short circuit tests on three-phase alternator: determination of its regulation by EMF and MMF methods.
3. Determination of direct axis and quadrature axis reactance by slip test on a synchronous machine.
4. Synchronizing alternators using lamp methods and synchroscope.
5. Characteristics of synchronous motor at constant load and variable excitation.
6. Characteristics of synchronous motor at constant excitation and variable load.
7. Determination of performance of a three-phase induction motor by direct load test.
8. Load test on single-phase induction motor.
9. Speed control of three-phase slip ring induction motor.
10. Study of different types of starters for three-phase squirrel cage induction motor.
11. Simulation of three-phase induction motor on MATLAB to obtain its performance.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Practical examination will be based on the entire syllabus including, the practicals performed during laboratory sessions.

Text Books

1. Ashfaq Hussain, "Electrical Machines", Dhanpat Rai and Company, 3rd Edition, 2016.
2. I. J. Nagrath and D. P. Kothari, "Electrical Machinery", Tata McGraw-Hill Education, 5th Edition, 2020.
3. M. V. Deshpande, "Electrical Machines", Prentice Hall of India, 2011.
4. V. K. Mehta and Rohit Mehta, "Principles of Electrical Machines", S. Chand Publication, 1st Edition, 2014.

Reference Books

1. P. S. Bimbhra, "Generalized Theory of Electrical Machines", Khanna Publishers, 7th Revised Edition, 2021.
2. M. G. Say, "Theory and Performance and Design of A.C. Machines", ELBS London, 2002.
3. J. B. Gupta, "Theory and Performance of Electrical Machines", S. K. Kataria Publications, 1st Edition, 2015.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
Power System Analysis (PCEE5020T)		
Power System Analysis Laboratory (PCEE5020L)		

Prerequisites: Fundamental of Electrical Energy Generation System, Power System Transmission and Distribution

Course Objectives

1. To understand the concepts of per-unit system and modeling of power system.
2. To understand and analyze the different types of faults in Power system.
3. To understand basic electricity market principles and power exchange.
4. To study concept of power system stability and its analysis.
5. To understand and study the modern power system concepts like SCADA, PMU, Security analysis.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Analyze three phase fault for small power systems.	L4	Analyze
CO2	Apply the concept of symmetrical components and evaluate the symmetrical components under fault conditions.	L3	Apply
CO3	Analyze unsymmetrical faults for small power networks.	L4	Analyze
CO4	Explain electricity market concepts of a deregulated power system and demand side management.	L2	Understand
CO5	Apply the knowledge for stable operation of power system and analyze the stability of power system.	L3	Apply

Power System Analysis (PCEE5020T)

Course Contents

Unit-I

08 Hrs.

Representation of Power System: Representation of power system components , per unit quantities – single phase and three phase selection of base quantities, advantages of PU systems, complex power, sequence networks of power system, regulating transformers, generators, transmission line, phase shift in star-delta transformer, sequence impedance of transmission line, transformer and generators.

Unit-II

08 Hrs.

Symmetrical Fault Analysis and Components: Transient on a transmission line, Symmetrical fault analysis without and with pre-fault load currents, selection of circuit Breakers ratings, current limiting reactors, Symmetrical Component transformation, Operator a , Three phase power in unbalanced circuit in terms of symmetrical component, formation of sequence network of power system.

Unit-III

08 Hrs.

Unsymmetrical Fault Analysis: Introduction, Single line to ground fault (LG) on an unloaded generator, line to line fault (LL) on an unloaded generator, double line to ground fault (LLG) on an unloaded generator, unsymmetrical fault on power systems, Single line to ground fault (LG) on a power system, line to line fault (LL) on a power system , double line to ground fault(LLG) on a power system, Shunt type and series type faults.

Unit-IV

09 Hrs.

Load Flow Analysis : Introduction, Analysis of power flows, Network model formation, Formation of Bus Admittance Matrix. Real and reactive power balance equations at a node. Load and Generator Specifications. Application of numerical methods for solution of non-linear algebraic equations – Gauss Seidel and Newton-Raphson methods for the solution of the power flow equations, Comparison of load flow studies, Computational Issues in Large-scale Power Systems.

Unit-V

09 Hrs.

Power System Economics, Stability and Management: Basic Pricing Principles, Generator Cost Curves, Utility Functions, Power Exchanges, Spot Pricing, Electricity Market Models (Vertically Integrated, Purchasing Agency, Whole-sale competition, Retail Competition), Demand Side-management, Transmission and Distributions charges, Ancillary Services, Regulatory framework.

Concepts of Stability, classification of Power System stability, Dynamics of a synchronous machine, Importance of Stability analysis in power system planning and operation, angle and voltage stability, Transient stability analysis, factor affecting transient stability, Methods to Improve transient stability, Single Machine Infinite bus (SMIB), Swing equation and its expression.

List of Laboratory Experiments

Suggested Experiments: (Perform 10 experiments from the following list of experiments. (1– Hardware, 8 – Simulation and 1 – Innovative))

1. To study the effect of VAR compensation on voltage profile of transmission line using capacitor bank.
2. Load Flow Analysis using Newton Raphson (NR) Method Experiment.
3. Load Flow Analysis using Fast Decoupled (FD) Method.
4. Load Flow Analysis using Gauss Seidel (GS) Method.
5. Measurement of Direct axis and Quadrature axis reactance of synchronous machine.
6. Formation and calculation of Y BUS .
7. Formation and calculation of Z BUS .
8. Simulation and analysis for a symmetrical three phase fault.
9. Simulation and analysis of unsymmetrical fault LL.
10. Simulation and analysis of unsymmetrical fault LG.
11. Simulation and analysis of unsymmetrical fault LLG.
12. To study Transient and small signal stability analysis of Single Machine connected to infinite bus.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Practical examination will be based on the entire syllabus including, the practicals performed during laboratory sessions.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
Electromagnetic Engineering (PCEE5030T)		

Prerequisite: Engineering Mathematics, Basic Electrical and Electronics Engineering.

Course Objectives

1. To introduce the beginner level mathematical concepts in the Electromagnetic Engineering.
2. To understand basic concepts of static electric field and its associated quantities.
3. To understand the boundary condition particularly a boundary between conducting material and free space.
4. To understand the magneto static fields, magnetic flux density, vector potential and its applications.
5. To understand emf generation methods and Maxwell's equations

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Apply the basic concept of mathematics and laws of electromagnetism to solve complex engineering problems.	L3	Apply
CO2	Explain the basic concept of electrostatic fields and their applications.	L2	Understand
CO3	Apply knowledge of electric and magnetic fields to solve boundary conditions problems.	L3	Apply
CO4	Explain magneto-static fields and their applications.	L2	Understand
CO5	Apply knowledge of numerical methods to solve electro-magnetic field problems.	L3	Apply

Electromagnetic Engineering (PCEE5030T)

Course Contents

Unit-I

09 Hrs.

Electrostatics: Vector algebra, Components of vectors, three orthogonal coordinate systems (rectangular, cylindrical and spherical), Conversion of a vector from one coordinate system to another, Charge and Coulomb's Law, Electric Field and Electric Field Intensity, Line, Surface and Volume charge distributions, Electric Flux and Electric Flux Density, Gauss law and applications.

Unit-II

08 Hrs.

Applied Electrostatics: Work done, Electrostatic Potential and Potential difference, Potential Gradient and Relation between E and V, Electric Dipole, Capacitor and Capacitance, Parallel plate, co-axial, spherical capacitor, Capacitance of a two wire line

Unit-III

08 Hrs.

Conductors and Dielectrics: Current and Current Density, Poisson and Laplace Equation, Energy Stored in Electrostatic Field, Conductors and their properties, Dielectric strength and dielectric breakdown, Boundary conditions in electrostatics.

Unit-IV

09 Hrs.

Magnetostatics: Magnetic Field and Magnetic Field Intensity, Biot-Savart Law, Amperes Law, Relation between H and J and Strokes Theorem, Magnetic Flux Density and Permeability, Magnetic Scalar and Vector Potentials, Forces in Magnetic Field, Boundary conditions in magnetostatics.

Unit-V

08 Hrs.

Time Varying Fields and Finite Element Method: Faradays Law, Displacement current and displacement current density, Maxwell's equations, Power and Poynting Theorem, Phasor form of harmonic fields, Uniform Plane Wave, Method of Moments, Finite Element Method.

Text Books

1. N. Rao, "Elements of Engineering Electromagnetics", Prentice Hall, 6th Edition, 2004.
2. Matthew N. O. Sadiku, "Element of Electromagnetics", Oxford University Press, 3rd Edition, 2003.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
Electric Traction and Utilization (PCEE5040T)		

Prerequisite: Basics of Electrical Engineering and Electrical Machine-I.

Course Objectives

1. To understand energy conversion process.
2. To impart knowledge of principles of electrical traction .
3. To explore various electrical subsystems of traction .
4. To possess knowledge of advanced and emerging topics in traction mechanism and applications.
5. To meet desired needs of locomotive industry within realistic constraints.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the types of traction systems.	L2	Understand
CO2	Interpret various power supply in electric traction.	L4	Analyze
CO3	Analyze various traction motors.	L4	Analyze
CO4	Analyze methods of traction motor control.	L4	Analyze
CO5	Evaluate train movement and braking in traction system.	L5	Evaluate

Electric Traction and Utilization (PCEE5040T)

Course Contents

Unit-I

08 Hrs.

Electric Traction System: Requirements of Ideal Traction Systems. Types of electric drives, choice of motors, classification of loads. Electrical transmission system supplying traction motors, Advantages of electric traction over other systems of traction, Ideal choice of traction system. Track electrification: D.C. System, single phase low frequency A.C. system, single phase high frequency A.C. system, 3 phase A.C. system and composite system, Latest Developments with special reference to locomotives.

Unit-II

08 Hrs.

Power Supply for Electric Traction: Current collection system, current collectors for Over Head Systems, Overhead construction for Tramways and trolley buses and railways, Traction substations, location of substations, feeding and distributing system, substation equipment's. Block Diagram of AC Electric locomotive, Signaling.

Unit-III

09 Hrs.

Traction Motors: Characteristics of traction motors, straight D.C. series motor, suitability of series motor for traction duty, constructional details of D.C. Traction Motors, suitability of shunt motor for traction duty, single phase series motors, Three phase Induction motor, Linear Induction motor.

Unit-IV

08 Hrs.

Traction Control : Traction control: Duty cycle, Methods of traction motor control, series-Parallel and other types of controllers, use of interlocks, run back prevented, multiple unit control, Master controllers, and use of Metadyne.

Unit-V

09 Hrs.

Train Movement and Braking: Speed time curve for different services, schedule speed and factors affecting it, train resistance and its components. Tractive effort calculations, average acceleration and speed, energy output and consumption. Mechanical versus electric braking, Plugging, Rheostatic braking, Regenerative braking method and energy saved in the process, Magnetic track brakes.

Text Books

1. C. L. Wadhwa, "Generation, Distribution and Utilization of Electrical Energy", New Age international Publishers, 2015.
2. Gonzalo Abad, "Power Electronics and Electric Drives for Traction Applications", Wiley, 2016.
3. E. Openshaw Taylor, "Utilization of Electric Energy", Orient Longman, 2006.

Reference Books

1. J. B. Gupta, "Utilization of Electrical Power and Electric Traction", Kataria & Sons, 2013.
2. H. Partab, "Modern Electric Traction", Dhanpat Rai & Company, 2017.
3. Edward P. Burch, "Electric Traction for Railway Trains", McGraw Hill Book Company, 2007.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
Solar Power Plant Design and Installation (PEEE5051T)		
Solar Power Plant Design and Installation (PEEE5051L)		

Prerequisites: Knowledge of Basics of materials science and engineering.

Course Objectives

1. To Acquire knowledge on solar radiation principles with respect to solar energy estimation.
2. To familiarize the students with design methods of solar thermal and photovoltaic systems.
3. To Identify various energy technologies, codes, certifications and their relationship with solar photovoltaic system.
4. To learn the fundamentals, design and application of solar photovoltaic systems for power generation on small and large scale electrification.
5. To Analyze solar photovoltaic system energy and building resources.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Apply solar radiation principles for accurate estimation of solar energy potential.	L3	Apply
CO2	Design solar thermal and photovoltaic systems using appropriate methodologies.	L6	Design
CO3	Analyze energy technologies, standards, codes, and certifications and assess their impact on solar photovoltaic system implementation.	L4	Analyze
CO4	Analyze and design solar photovoltaic systems for small-scale and large-scale power generation applications.	L4	Analyze
CO5	Evaluate and compare materials and methods used in solar photovoltaic systems for performance and reliability.	L5	Evaluate

Solar Power Plant Design and Installation (PEEE5051T) Course Contents

Unit-I

08 Hrs.

Basics of Solar Cell : Photovoltaic effect - Principle of direct solar energy conversion into electricity in a solar cell. Fundamental of semiconductor, Charge Carriers and their motion in Semiconductor, Semiconductor properties, energy levels, basic equations. P N Junction Diode.

Unit-II

08 Hrs.

Design of Solar Cells: Upper limits of cell parameters, Losses in Solar cell, Solar cell design, Design for High Isc, Design for high Voc. Design for high FF, Analytical Techniques.

Unit-III

09 Hrs.

Solar Cell Technologies: Production of Si, Si Water based solar cell technology-Processes used in solar cell technology, High efficiency si solar cells. Thin film solar cell technologies –generic advantages of thin film technologies, Materials for thin film technologies. Microcrystalline si thin film technology.

Unit-IV

09 Hrs.

Photovoltaic System Design : Stand Alone PV System Configurations, Design Methodology of PV System, wire sizing in PV System, Hybrid PV System, Grid Connected PV System, and Lifecycle Costing.

Unit-V

08 Hrs.

Solar Photovoltaic Applications: Solar Radiation-the sun and earth movement, Angle of Sunrays on solar collector, Sun Tracking, Solar Photovoltaic Modules: Solar PV Modules from solar cell, Design and structure of PV Modules. PV Module Power Output.

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Simulation study on Solar PV Energy System.
2. Simulation On Vi-Characteristics And Efficiency Of 1kwp Solar Pv System.
3. Effect of shading on solar pannel performance.
4. Effect of temperature and tilt angle on solar panel.
5. To demonstrate the I-V and P-V characteristics of PV module with varying radiation and temperature level of series and parallel combination of PV modules.
6. To demonstrate the effect of variation in tilt angle and shading on PV module.
7. To demonstrate the working of diode as bypass diode and blocking diode.
8. Workout power flow calculations of stand-alone PV system with combined DC and AC load with battery.
9. To draw the charging and discharging characteristics of battery.
10. Evaluate the efficiency of charge controller.
11. Find out the start up speed and cut -in speed of wind turbine and also find Tip Speed ratio (TSR) at different wind speeds.
12. Evaluate the coefficient of performance of wind turbine.
13. Draw the Turbine Power versus Wind Speed curve.
14. Draw the curve between TSR and coefficient of power.
15. Draw the power curve of turbine with respect to the rotational speed of rotor at fix wind speeds.
16. Demonstrate the power analysis at different branches of wind turbine energy system (at high frequency) with AC load and DC load.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

Practical examination will be based on the entire syllabus including, the practicals performed during laboratory sessions.

Text Books

1. D. Yogi Goswami, "Principles of Solar Engineering", CRC Pres, 3rd Edition, 2015.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
IoT and Its Applications in Electrical Engineering (PEEE5052T)		
IoT and Its Applications in Electrical Engineering Laboratory (PEEE5052L)		

Prerequisite: Basic Electrical and Electronics Engineering, Electrical Measurement.

Course Objective

1. To provide an overview of concepts, trends and challenges of Internet of Things.
2. To impart the knowledge of sensors and embedded systems.
3. To describe IoT deployment levels and M2M technologies.
4. To facilitate use of hardware and software technologies related to Internet of Things.
5. To provide the knowledge of IoT communication models and protocols.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the knowledge of sensors and embedded systems.	L2	Understand
CO2	Apply the concepts of different IoT processors and controllers.	L3	Apply
CO3	Apply the basic sensor network concepts to IoT.	L3	Apply
CO4	Analyze the IoT communication models and protocols.	L4	Analyze
CO5	Design and develop small IoT applications to create smart objects.	L6	Create

IoT and Its Applications in Electrical Engineering (PEEE5052T) Course Contents

Unit-I

08 Hrs.

Transducers, Sensors and Actuators: Introduction and classification of Transducers, Sensors and Actuators, Types of Sensors: Motion Detectors, Force Sensors, Temperature and Humidity Sensors, Light Sensor, Level Sensor, Ultrasonic Sensor, Current and voltage Sensor, Types of Actuators, Solenoid, DC Motor, AC Motor and Stepper motor.

Unit-II

08 Hrs.

Introduction to Arduino and Raspberry Pi-Arduino: Pin configuration and architecture, Device and platform features, Concept of digital and analog ports, Familiarizing with Arduino Interfacing Board and its types, Arduino platform.

Raspberry Pi : Introduction to Raspberry Pi, Comparison of various Rpi Models, Understanding SoC architecture and SoCs used in Raspberry Pi, Pin Description of Raspberry Pi, On-board components of Rpi.

Unit-III

08 Hrs.

Introduction to WSN and IoT: Introduction to WSN and its Technologies, Architecture and characteristics of WSN, Scalability issues and challenges of a Wireless Sensor Network. Introduction to Internet of Things, Characteristics and applications of IoT, IoT Reference Model, Security issues in the IoT, Disambiguation of IoT vs IoE vs M2M vs others. Overview of Cloud and Fog Computing, Definition, Difference between Fog and Cloud.

Unit-IV

10 Hrs.

IoT Communication Technologies and Protocols: Introduction to communication Technologies like Wi-Fi, Bluetooth, RFID, Z-Wave, Zigbee. IoT Levels and Deployment Templates, Various operating systems, TinyOS, Contiki OS, Protocol Classification, MQTT, XMPP, DDS, AMQP, COAP, REST, IPv6, 6LoWPAN, Comparison of protocols.

Unit-V

08 Hrs.

IoT Applications: Reading sensor data and sending it to cloud platform, Visualization and analysis of the data on cloud, actuation and control, case study - Home automation, smart grid .

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Study and Install IDE of Arduino and different types of Arduino.
2. Write program using Arduino IDE for Blink LED.
3. Write program to monitor temperature and humidity using Arduino.
4. Design of digital dc voltmeter and ammeter.
5. Design of digital ac voltmeter and ammeter.
6. Design of digital frequency meter.
7. Measurement of power and energy.
8. Traffic signal control.
9. Railway gate control by stepper motors.
10. Direction and Speed control of DC motor.
11. Over/under voltage protection of home appliances.
12. Reading sensor data and sending it to cloud platform for temperature and humidity sensor.

Any other experiment based on syllabus may be included which would help the learner to understand the topic/concept.

Practical examination will be based on the entire syllabus including the practicals performed during laboratory sessions.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
Digital Signal Processing (PEEE5053T)		
Digital Signal Processing Laboratory (PEEE5053L)		

Prerequisite: Signals and System, Engineering Mathematics.

Course Objectives

1. To develop a thorough understanding of DFT and FFT and their applications.
2. To teach the design techniques and performance analysis of digital filters.
3. To design the IIR and FIR filters.
4. To understand the use of digital signal processing in electrical engineering.
5. To introduce the students to digital signal processors and its applications.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Apply efficient computational algorithms of DFT and FFT to determine the response of discrete-time systems.	L3	Apply
CO2	Design FIR and IIR digital filters based on given frequency-domain specifications.	L6	Create
CO3	Evaluate the influence of poles and zeros on the stability and frequency response of digital filters.	L5	Evaluate
CO4	Analyze the architecture and functional blocks of DSP processors.	L4	Analyze
CO5	Explain the applications of digital signal processing techniques in electrical engineering systems.	L2	Understand

Digital Signal Processing (PEEE5053T)

Course Contents

Unit-I

08 Hrs.

Discrete Fourier Transform and Fast Fourier Transform: Definition and Properties of DFT, IDFT, Circular convolution of sequences using DFT and IDFT. Filtering of long data sequences: Overlap-Save and Overlap-Add Method for computation of DFT. Fast Fourier Transforms (FFT), Radix-2 decimation in time and decimation in frequency FFT algorithms, inverse FFT.

Unit-II

09 Hrs.

IIR Digital Filters: Types of IIR Filters (Low Pass, High Pass, Band Pass, Band Stop), Analog filter approximations: Butterworth, Chebyshev-I. Mapping of S plane to Z plane, impulse invariance method, bilinear transformation method, Design of IIR digital filters (Butterworth and Chebyshev-I) from Analog filters with numerical examples. Effect of Poles and Zeros on the Frequency Response of IIR filters. Position of Poles and Zeros of Low Pass, High Pass, Band Pass, Band Stop, All Pass filters.

Unit-III

08 Hrs

FIR Digital Filters: Characteristics of FIR digital filters, Minimum Phase, Maximum Phase, Mixed Phase and Linear Phase (Type 1 to Type 4) FIR Filters. Design of FIR filters using Window techniques (Rectangular, Hamming, Hanning, Blackman, Kaiser), Design of FIR filters using Frequency Sampling technique, Comparison of IIR and FIR filters.

Unit-IV

08 Hrs

Poles, Zeros and Filters: Effects of poles and zeros in the frequency response of IIR filters (LP, HP, BP, BR/Notch, All Pass filters). Placement of zeros and design of filters in Type1 to Type 4 Linear Phase FIR filters. Finite Word Length effects in Digital Filters Quantization, truncation and rounding, Error due to truncation and rounding.

Unit-V

09 Hrs.

Processor and Application in Electrical Domain: Introduction to General Purpose and Special Purpose DSP processors, fixed point and floating-point DSP processor, Computer architecture for signal processing, Harvard Architecture, Pipelining, multiplier and accumulator (MAC). Applications of Digital Signal Processing in Electrical Engineering domain.

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Plot of Discrete Time Signals.
2. Frequency response of LTI systems by DTFT .
3. To perform Discrete Fourier Transform .
4. To implement Circular Convolution of two discrete time sequences .
5. To perform Overlap Add method of DFT for long data sequence.
6. To implement the algorithm of DIT-Fast Fourier Transform.
7. To plot the FFT of Sinusoids with noise .
8. Magnitude and phase response of FIR filter .
9. Design an Analog Butterworth filter with given specifications .
10. Design a Digital IIR Butterworth filter with given specifications .
11. Design an FIR filter by window method.
12. Removal of Noise by a designed filter.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

The Oral/Practical examination will be based on the entire syllabus, including the experiments performed during laboratory sessions.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
Professional and Business Communication (HMEE5060T)		

Prerequisite: Basic course in Effective Communication Skills.

Course Objectives

1. To inculcate professional and ethical attitude at the workplace.
2. To enhance communication and interpersonal skills.
3. To develop effective presentation skills.
4. To have written skills for technical documentation.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Design and produce well-structured technical documents such as reports, proposals, and research papers by organizing content, composing original text, and integrating ethical standards in written communication.	L6	Create
CO2	Apply techniques of writing resume, participating in a group discussion and facing interviews.	L3	Apply
CO3	Use the principles of interpersonal skills and describe their application in professional and personal situations.	L3	Apply
CO4	Create professional meeting documentation and design effective meeting procedures demonstrating advanced communication and leadership skills.	L6	Create
CO5	Apply effective communication strategies to interact across diverse cultures and demonstrate appropriate professional work ethics in real-life scenarios.	L3	Apply
CO6	Design and deliver effective professional presentations using appropriate PowerPoint tools and presentation strategies.	L6	Create

Professional and Business Communication (HMEE5060T) Course Contents

Unit-I

08 Hrs.

Technical Writing: Report Writing: Types of report, parts of formal report, collection of data and survey analysis, pre-writing of report, language and style in reports, formatting of reports, referencing in report.

Proposal Writing: Types of technical proposals, format of proposal, language and style, presentation of proposal.

Technical Paper Writing: Parts of a technical paper, language and formatting, referencing in IEEE format.

Plagiarism: Types of plagiarism, consequences of plagiarism

Unit-II

08 Hrs.

Employment Skills: Group Discussion: Purpose of a GD, types of GD, criteria for evaluating a GD, Dos and Don'ts of a GD, Tips to be successful in GD.

Cover Letter and Resume Writing: Format and content of cover letter, types of resume, structure, content and formatting of resume.

Interview Skills: Types and modes of interview, Preparation for interview, Dos and Don'ts of interview, frequently asked questions during interview.

Unit-III

05 Hrs.

Introduction to Interpersonal Skills: Emotional Intelligence: Definition, difference between IQ and EQ, how to develop EQ.

Leadership: Types of leadership, leadership styles, case studies.

Team Building: Difference between group and team, importance of team work, strategies to be a good team player.

Time Management: Importance of time management, cultural views of time, 80/20 rule, time wasters, setting priorities and goals, .

Conflict Management: Types of conflicts, strategies to manage conflict, case studies.

Unit-IV

03 Hrs.

Meetings and Documentation: Planning and preparation for meetings, strategies for conducting effective meetings, notice, agenda and minutes of a meeting, business meeting etiquettes.

Unit-V

04 Hrs.

Cross-cultural communication, Ethics and Presentation Skills: Communication across cultures, professional and work ethics, responsible use of social media, introduction to Intellectual Property Rights. Presentation strategies, overcoming stage fear, techniques to prepare effective PowerPoint presentation.

Professional and Business Communication (HMEE5060T)

List of Assignments

Suggested Assignments:

1. Business Proposal (PowerPoint presentation).
2. Resume writing.
3. Interpersonal Skills (documentation of activity).
4. Meetings and Documentation (Notice, Agenda, Minutes of Mock Meetings).
5. Business ethics.
6. Presentation Skills.

Laboratory work will be based on subject specific lab assignment/case study.

The final certification and acceptance of term work will be subject to satisfactory performance of laboratory work and upon fulfilling minimum passing criteria in the term work.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
Semester Project-III (PJEE5070L)		

Course Objectives

1. To design, simulate/implement a project based on the knowledge acquired from subject areas like Control System, Electrical Machines, Power System, Electromagnetic, Internet of Things, Signals and Systems, Database Management System.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Analyze a survey of several available literatures in the preferred field of study.	L4	Analyze
CO2	Describe various/alternate approaches to complete a project.	L2	Understand
CO3	Apply a collaborative project environment by interacting and dividing project work among team members.	L3	Apply
CO4	Use technical communication skills to present project work in the form of a technical report/paper.	L3	Apply
CO5	Apply teamwork and project management skills to plan, execute, and manage the research study.	L3	Apply

Semester Project-III (PJEE5070L)

Course Contents

Syllabus:

Semester Project: The purpose of introducing semester project at Third Year level is to provide exposure to students with a variety of projects based on the knowledge acquired from the semester subjects. This activity is supposed to enrich their academic experience and bring enough maturity in student while selecting the project. Students should take this as an opportunity to develop skills in implementation, presentation and discussion of technical ideas/topics. Therefore, proper attention shall be paid to the content of semester project report which is being submitted in partial fulfillment of the requirements of the Third Year and it is imperative that a standard format be prescribed for the report. Each student shall work on project approved by departmental committee approved by the Head of Department, a group of 03 to 05 students (max allowed: 5 students in extraordinary cases, subject to the approval of the department committee and the Head of the department) shall be allotted for each Semester Project. Each group shall submit at least 3 topics for the Semester Project. The departmental committee shall finalize one topic for every group. Semester Project Title or Theme should be based on knowledge acquired during current semester. The project work shall involve sufficient work so that students get acquainted with different aspects of knowledge acquired from semester subjects

Guidelines:

Student is expected to:

- Select appropriate project title based on acquired knowledge from current semester subjects.
- Maintain Log Book of weekly work done (please see attached log book format).
- Report weekly to the project guide along with log book

Assessment Criteria:

- At the end of the semester, after confirmation by the project guide, each project group will submit project completion report in prescribed format for assessment to the departmental committee (including project guide).
- Assessment of the project (at the end of the semester) will be done by the departmental committee (including project guide).
- Oral examination should be conducted by Internal and External examiners. Students have to give presentation and demonstration based on their project.

Prescribed Project Report Guidelines:

Size of report shall be of minimum 25 pages. Project Report should include appropriate content f

- Introduction
- Literature Survey

- Related Theory
- Implementation details
- Project Outcomes
- Conclusion
- References

Assessment criteria for the departmental committee (including project guide) for End Semester Exam:

Each review consists of 25 marks. Average of the marks scored in both the two reviews will be considered for final grading. The final certification and acceptance of TW ensures the satisfactory performance on the below mentioned aspects.

Table 1: Log Book Format

S. N.	Week (Start Date : End Date)	Work Done	Sign of Guide	Sign of Coordinator
1				

Table 2: Continuous Assessment Sheet

S. N.	Exam Seat No	Name of Student	Student Attendance (5)	Log Book Maintain (5)	Literature Review (5)	Depth of Understanding (5)	Report (5)	Total (25)

Table 3: Evaluation Sheet

S. N.	Exam Seat No	Name of Student	Project Selection (5)	Design / Simulation / Logic (5)	PCB / Hardware / Programming (5)	Result Verification (5)	Presentation (5)	Total (25)

Each group will be reviewed twice in a semester by faculty guide and faculty coordinator based on the following criteria:

- Project progress
- Documentation/Technical paper writing
- Key findings
- Validation of results
- Product Development

Program: Electrical Engineering	T. Y. B. Tech.	Semester: V
Employability Skill Development Program-II (HMEE5080L)		

Prerequisite: Basic Mathematics, Basic knowledge of C programming

Course Objectives

1. To enhance the problem solving skills with real life examples.
2. To enable the students to express their thoughts and knowledge on various platforms.
3. Able to describe the basic database management system.
4. Able to implement basic programming project using python.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Solve logical problems based on words, Venn diagrams, etc.	L4	Analyze
CO2	Solve English comprehension, sentence completion, and sentence correction problems.	L4	Analyze
CO3	Illustrate the concepts of Exception Handling and Garbage Collection.	L3	Apply
CO4	Describe the fundamentals of DBMS, NoSQL, and MongoDB.	L2	Understand

Employability Skill Development Program-II (HMEE5080L) Course Contents

Unit-I

10 Hrs.

Reasoning : Data sufficiency, Logical Deductions, Logical Sequence of Words, Logical Venn Diagrams, Statement and Arguments, Statement and Assumptions, Statement and Conclusions Syllogism.

English: Reading Comprehension, Para Jumbles, Cloze Test, Tenses/ Voice/ Speech, Prepositions/ SVA/ Articles, Vocab /Verbal Analogy, Sentence completion, Sentence Correction

Unit-II

10 Hrs.

Modules Introduction, Importance of Modularity programming, Import keyword, User defined modules creation, Function based modules, Classes based modules, Connecting modules, 'from' keyword.

Files Handling Reading file char by character, Reading file line by line, Modes of files, Writing into file, Append data to a file, Reading CSV file, Pickling and Un pickling

Garbage collection Introduction, Importance of manual GC, Self-referenced objects, 'gc' module, Collect() method, Threshold function

Unit-III

8 Hrs.

Collections Framework Introduction to collection of data types, Importance of Data processing, DS algorithms introduction.

List Create a list, Adding elements, Deleting elements, Pre-defined functionality of List, Nested List, Immutability and Mutability of List.

Set The functionality of Set object, Frozen set, Dictionaries, Create a dictionary, Adding elements

Dict Pre-defined functions of Dict class, Programs using Collection types .

Unit-IV

08 Hrs.

Tkinter – GUI Types of Layouts , Create Labels and Display images, Create Buttons, Create Events, StringVar class, Calculator program using GUI.

Basic ML AI including Projects Iterators, Nested functions, Generators, Closures, Decorators, Basic ML and AI, PIP, Visualization etc.

Project Domain(Per domain 1 or 2 project)

- ML/AI Based Projects
- Data Analysis Based projects
- Test Summarization based projects
- Web scrapping and crawling

Unit-V

10 Hrs.

DBMS Using Python Introduction to Mysql, Mysql – Python connectivity, DDL, DRL, DML, Transaction management examples (rollback and commit), GUI - Database connectivity.

NoSql Using Python Installation and Configuration, MongoDB Tools, Collection and Documents, CRUD and the MongoDB Shell, Introduction to CRUD, Introduction to the MongoDBAPI, Creating a Database, Collection and Documents.

Data Modelling and Schema Design MongoDB Database References Model Tree Structures, MongoDB Analysing Queries, Atomic Operations, Map Reduce, Text Search, Regular Expression, Capped Collections.

Administration MongoDB Deployment and Cluster setup, MongoDB GridFS, Trident Spout, Working with Replica Sets, MongoDB Sharding.

Text Books

1. Dr. R S Aggarwal, "Quantitative Aptitude for Competitive Examinations", S Chand Publication.
2. M. G. Venkateshmurthy, "Programming Techniques through C", Pearson Publication, 1st edition, 2002.
3. Behrouz Forouzan, "A Computer Science Structure Programming Approaches using C", Cengage Learning, 3rd edition, 2007.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
Control System (PCEE6010T)		
Control System Laboratory (PCEE6010L)		

Prerequisite: Electrical Measurement, Signal and System.

Course Objectives

1. To know different basic concepts and components of a control system.
2. To model physical systems mathematically.
3. To derive transfer functions of basic control system components.
4. To perform stability analysis using time domain and frequency domain response on a given system.
5. To learn the various approach for the state space analysis.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the basic concepts of control systems and derive the mathematical models of different types of systems.	L2	Understand
CO2	Solve transfer function for a given control system using block diagram reduction techniques and signal flow graph method.	L3	Apply
CO3	Determine time response of systems for a given input and perform analysis of first and second order systems using time domain specifications.	L3	Apply
CO4	Analyze the stability of a system in the time domain using Routh-Hurwitz criterion and Root-locus technique.	L4	Analyze
CO5	Analyze the stability of a system in the frequency domain using Nyquist and Bode plots.	L4	Analyze
CO6	Solve various transfer functions of digital control system using state variable models.	L3	Apply

Control System (RCP23LCPC501)

Course Contents

Unit-I

06 Hrs.

Mathematical Modeling of Control Systems: Concept of open and closed loop control system, Transfer Function: a) Concept of system: physical system, Physical model, Linear and non-linear systems, Time variant and invariant system. b) Equations of physical systems (Mass-Spring-Dashpot system, R-L-C series and parallel circuit) transfer function, transfer function of DC servo motor – AC servo motor – synchro, transmitter and receiver.

Unit-II

08 Hrs.

Block diagrams and Signal Flow Graphs: Block Diagram reduction, and Numerical examples.

Signal flow graph: Mason's gain formula for deriving overall transfer function of systems.

Feedback characteristics of control system: Concept of negative and positive feedback, Sensitivity of the system to parameter variation, using negative and positive feedback.

Unit-III

10 Hrs.

Time Domain Analysis and Stability of System:

Time domain analysis: Typical test signals, Time domain specifications, Steady state response, Types of system, Steady state error constants and steady state error, Numerical examples, transient response, Numericals, Concept of stability.

Stability: Definition of stability, Routh and Hurwitz criterion. Definition of Root Locus, Construction of root locus, and Stability from root locus plots, Root counters, Effect of addition of poles and zeros on root locus plots.

Unit-IV

10 Hrs.

Frequency Domain Analysis: Introduction to frequency response, Advantages of frequency domain analysis, Bode plots, Nyquist criterion, Relative stability from Nyquist criterion, Numericals.

Unit-V

06 Hrs.

State Space Analysis of LTI Systems: Concepts of state, state variables and state model, state space representation of transfer function, diagonalization, solving the time invariant state equations, State Transition Matrix and its Properties, concepts of controllability and observability.

Control System Laboratory (RCP23LLPC501)

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. To determine Speed-Torque characteristics of an ac servomotor.
2. To determine an error using Potentiometer.
3. Experimental analysis of D.C. Motor Position control System.
4. Obtain output vs input characteristics for synchro-transmitter and receiver.
5. Experimental analysis of Stepper Motor.
6. To determine time domain response of a second order systems for step input and obtain performance parameters by using MATLAB
7. To plot root locus diagram of an open loop transfer function and determine range of gain 'k' for stability by using MATLAB.
8. To plot a Bode diagram of an open loop transfer function by using MATLAB.
9. To draw a Nyquist plot of an open loop transfer function and examine the stability of the closed loop system by using MATLAB.
10. Construct a Simulink diagram to calculate the response of the Mass-Spring system.
11. Study the effect of addition of zeros to the forward path transfer function of a closed loop system.
12. Simulink based control system mini project.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

The Oral/Practical examination will be based on the entire syllabus, including the experiments performed during laboratory sessions.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
Power Electronics (PCEE6020T)		
Power Electronics Laboratory (PCEE6020L)		

Prerequisite: Basic Electrical and Electronics Engineering, Circuit Theory.

Course Objectives

1. Students will able to extend simple power electronic converters to realize rectifiers and inverters.
2. Students will able to develop and quantify common performance objectives for power electronic circuits such as efficiency, power factor, etc.
3. Students will able to analyze and design DC-DC converter (chopper) circuits.
4. Students will able to analyze and evaluate the operation of cyclo-converters and voltage controllers.
5. Students will able to outline operating principles of application of power electronic circuits as motor drives, UPS systems, etc.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Apply the basic principle, characteristics and applications of power electronic and switching devices.	L3	Apply
CO2	Analyze study of different types of Power Converter systems.	L4	Analyze
CO3	Evaluate the numerical problems on semiconductor switches, rectifier, converter, inverter, choppers and cyclo-converter circuits.	L5	Evaluate
CO4	Analyze the DC-DC and DC-AC converters.	L4	Analyze
CO5	Understand the various Pulse Width Modulation techniques.	L2	Understand

Power Electronics (PCEE6020T)

Course Contents

Unit-I

08 Hrs.

Power Semiconductor Devices : BJT, MOSFET, IGBT: Construction, working, Steady state, Switching Characteristics, Ratings and applications.

Thyristor: V-I, dynamic and gate Characteristics, Turn ON Methods, Ratings, R, R-C, UJT firing circuits, Protection Circuits, Commutation Techniques. **GTO Thyristor:** Construction, Working and Application, TRIAC- four mode operation, triggering of TRIAC using DIAC, SITH.

Unit-II

09 Hrs.

Single and Three Phase AC-DC Converter: Single phase Converter: Fully controlled converter, Half controlled converter (Semi converter): Operation of all converters with R and RL load, derivation of Average and RMS output voltage, power factor, THD, TUF. Single phase dual converter.

Three phase Converter: Fully controlled converter, Half controlled converter (Semi converter)-Operation of all converters with R, RL load, derivation of Average and RMS output voltage, Three phase dual converter.

Unit-III

08 Hrs.

DC-DC Converter: Classification of choppers, Basic Chopper operation: Step up and step down , types of chopper circuits and their operation: Class A, B,C,D and E, Chopper control techniques: Time ratio control, current limit control, Thyristor Chopper Circuits: Voltage, current, load commutated chopper, Series Turn OFF , Single SCR Chopper, Morgan and Jones Chopper Multiphase Choppers, AC Chopper.

Unit-IV

09 Hrs.

DC-AC and AC-AC Converter: DC-AC Converter:Single phase inverters- series, parallel and bridge configurations with R load, PWM inverters. Three phase inverters: 120° and 180° conduction with R and load RL, voltage control methods, PWM Techniques and harmonic reductions.

AC Voltage Regulator: Single phase AC Voltage regulator; operation with R and RL Load, derivation of Average and RMS output voltage. Concept of two stage AC voltage regulator.

Cyclo-Converters: single phase and three phase Cyclo-Converters.

Unit-V

08 Hrs.

Applications of Power Electronic: UPS and SMPS, Smart Grid, Micro Grid, Energy Storage and Management systems, Hybrid Electric Vehicle, Solar Energy Systems.

Power Electronics Laboratory (PCEE6020L)

List of Laboratory Experiments

Suggested Experiments: (Any 10)

Group:- A (Hardware or Trainer Kits)

1. Study and Plot the V I Characteristics of SCR and MOSFET.
2. Study and perform a SCR Gate Triggering using UJT Relaxation Oscillator.
3. Study the turn off methods of SCR (Forced Commutation)
4. Perform the single phase semi converter with R , R-L Load.
5. Perform the single phase full converter with R , R-L Load.
6. Perform the three phase full converter with R , R-L Load.
7. Study and Perform the SCR Step down Chopper circuit.
8. Study of three phase inverter (VSI).
9. Three phase voltage source inverter using 120 and 180 degree mode.
10. Single phase A.C. voltage regulator with R and RL load

Group:-B (MATLAB Simulations)

1. MATLAB Simulation of Single Phase Half wave Controlled Rectifier with R and R-L Load.
2. MATLAB Simulation of Single Phase Full wave Controlled Rectifier with R and R-L Load.
3. MATLAB Simulation of Step up chopper circuit.
4. MATLAB Simulation of Step down chopper circuit.
5. MATLAB Simulation of Single phase full bridge inverter.
6. MATLAB Simulation of Three phase 180 degree conduction mode of inverter.
7. MATLAB Simulation of AC Voltage Controller.
8. MATLAB Simulation of Step up Cyclo-Converter circuit.
9. MATLAB Simulation of Solar Power Generation for Home (**Innovative**)
10. MATLAB Simulation of Phase Locked Loop(PLL) for 3 phase grid connected inverter. (**Innovative**)

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

The Oral/Practical examination will be based on the entire syllabus, including the experiments performed during laboratory sessions.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
Electrical Machine Design (PCEE6030T)		
Electrical Machine Design Laboratory (PCEE6030L)		

Prerequisite: Knowledge of Electrical Machine-I, Electrical Machine-II, fundamentals of electrical engineering, and various materials used in electrical machines.

Course Objectives

1. To understand the fundamental aspects and modern trends in electrical machine design.
2. To study the properties of materials used in transformers and rotating machines.
3. To design transformers and induction motors based on standard specifications.
4. To analyze thermal performance and cooling methods of electrical machines.
5. To apply computer aided design techniques in transformer and motor design.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Apply knowledge of mathematics, science, and engineering for design of electrical machines.	L3	Apply
CO2	Analyze the electrical engineering material characteristics for designing an energy efficient electrical machine.	L4	Analyze
CO3	Analyze the temperature rise in electrical machines and its impact on rating and duty of machines.	L4	Analyze
CO4	Analyze and design electrical machines and components to meet desired needs within realistic constraints such as economic, environmental, social, safety, manufacturability, and sustainability.	L6	Create
CO5	Apply discharge duties in the field of design and manufacturing industries and pursue higher studies in optimal design using the latest software and engineering tools.	L3	Apply

Electrical Machine Design (PCEE6030T)

Course Contents

Unit-I

10 Hrs.

Fundamental Aspects of Electrical Machine Design: Design of machines: Design factors, limitations in design, modern trends in design of electrical machines, materials used in transformers and rotating machines. Thermal design aspects of electrical machines. Design of starters – shunt motors, series motors, slip ring induction motors.

Unit-II

12 Hrs.

Design of Transformer: Design of distribution and power Transformer, types, Classifications, specifications, core construction, transformer winding, design of Transformer, output equation of single phase and three phase transformer, design of core, winding, overall dimension, design of insulation, estimation of leakage reactance for H.V. and L.V. winding.

Unit-III

10 Hrs.

Design Performances of Transformer: No Load Current of –single phase, Three phase, Magnetizing Volt-ampere, change of Parameters with change of frequency, Temperature rise of transformers, design of tank with tubes, transformer oil as a cooling medium, temperature rise in plain walled tanks, air blast cooling, forced oil circulation, thermal rating, heating time constant of transformers.

Unit-IV

12 Hrs.

Design of Induction motors: Rating and dimensions of rotating Machines: symbols, factor affecting size of rotating machines, choice of specific magnetic loading, choice of specific electric loading, variation of output and losses with Linear dimensions, separation of D and L d.c. Machines, Induction Motors, Synchronous Machines, standard Frames.

Design of three phase Induction Motors: design output equation, choice of average flux density in air gap, choice of ampere conductors per meter, efficiency and power factor, main dimensions.

Unit-V

12 Hrs.

Design of Windings for AC and DC Machines: DC machine windings – types of DC windings, choice and design of simplex and duplex lap and wave windings, equalizer connections, dummy coils, concept of multiplex windings, reason for choosing them.

AC machine windings – single and double layer, single phase AC windings with integral and fractional slots, three phase windings.

Electrical Machine Design Laboratory (PCEE6030L)

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. To study General electrical symbol.
2. To study Electrical installation for residential building.
3. To study Design of Dc shunt motor starter.
4. To study Design of simplex lap winding.
5. To study Design of wave winding.
6. To study Design of ac lap winding.
7. To study design of Mush winding.
8. To study Design of ac wave winding.
9. Details and assembly of transformer with design report. (in CAD)
10. Assembly of three phase induction motor. (Sheet in CAD.
11. Report based on induction motor manufacturing/repairing unit.

Any other experiment based on syllabus may be included which would help the learner to understand topic/concept.

The Oral/Practical examination will be based on the entire syllabus, including the experiments performed during laboratory sessions.

2. A. E. Clayton, "Performance and Design of DC Machine", ELBS, Isaac Pitman Sons, 3rd Edition, 2004.
3. S. V. Kulkarni, S. A. Khaparde, "Transformer Engineering: Design and Practice", Marcel Dekker Inc., 2004.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
Testing and Maintenance of Electrical Equipment (PCEE6040T)		

Prerequisites: Knowledge of DC and AC machines, Electrical Power System.

Course Objectives

1. The Student will able to understand the importance of testing, concept of electrical safety, electrical accidents, its causes, and prevention.
2. Students will able to know various testing of single phase, three phase induction motor.
3. Students will able to know various testing of transformer and synchronous motor.
4. Students will able to know insulation material testing, routine, preventive and breakdown maintenance of electrical machines.
5. Students will able to understand troubleshooting of electrical equipment's.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain the importance of testing and electrical safety while working in plants.	L2	Understand
CO2	Apply the various testing of induction motor like routine, type, special and supplementary test.	L3	Apply
CO3	Apply the various testing of transformer, Synchronous motor and insulation like routine, type, special and supplementary test.	L3	Apply
CO4	Analyze the various testing parameters of stationary and rotating machines like voltage, current, power, speed, torque, regulation, efficiency etc.	L4	Analyze
CO5	Analyze the troubleshooting in an electrical machine like failure, causes and remedies of an electrical machines.	L4	Analyze

Testing and Maintenance of Electrical Equipment (PCEE6040T) Course Contents

Unit-I 08 Hrs.

Importance of Testing and Safety Measures: Importance of Testing : Objectives of testing, Significance of ISS, concept of tolerance, routine test, type test, special test , Method of testing
Safety Measures and Prevention of Accidents: Concept of Electric Safety, Electric Accidents , its causes and Preventions, IE act and statutory regulations for safety of persons and equipments working with Electrical Installation, Electric Shock, Necessity and types of earthing systems.

Unit-II 08 Hrs.

Testing of Induction Motor: Three Phase Induction motor testing : Insulation resistance test , High Voltage test, No load test, Blocked rotor test, reduced voltage running up test, Slip measurement, method of loss separation, temperature rise testing, momentary overload test
Single Phase Induction motor testing : Insulation resistance test, Winding Resistance, High Voltage test, No load test, Blocked rotor test, Quiet Running Test, Temperature Rise test, momentary overload test, Load test, Moisture Proofness Test, Leakage Current Test, Pull out Torque Test

Unit-III 08 Hrs.

Testing of Transformer and Synchronous Motor: Transformer Testing: DC resistance measurement, Polarity and Phasing out test, open circuit test, short circuit test, vector group test, magnetic balance test, Insulation resistance test
Synchronous Motor Testing: open and short circuit test, Over Speed test, high voltage test, Dark Lamp Method of Synchronizing, zero factors test, loss measurement test, Voltage Recovery test, Retardation Test.

Unit-IV 09 Hrs.

Insulation Testing and Maintenance : Testing of Insulating Material: Megger Test, testing of transformer oil as per IS 1692: flash point test, crackle test, dielectric strength test, acidity test.
Maintenance of Electric Machines: Procedure for developing preventive maintenance schedule, factors affecting preventive maintenance schedule, total productive maintenance, causes of failure of electric machines (internal and external), maintenance schedule of transformer (low and high capacity), induction motor, synchronous machines and batteries as per IS.

Unit-V 09 Hrs.

Trouble Shooting of Electrical Machines: Failure and Causes in Electrical Machines:-Internal and External causes for failure and abnormal operation of equipment's, Electrical Equipment's Fault: Mechanical, Electrical, Magnetic, Faults in cables, transformer and induction motor, troubleshooting charts for DC Machines, Induction Motor, Transformer.

Text Books

3. Indian Standards (IS Code) and IEEE Standards for Installation, Maintenance and Commissioning of Electrical Equipments/Machines

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
Energy Audit and Management (PEEE6061T)		

Prerequisites: Knowledge of power system , power system operation and control.

Course Objectives

1. The Student will able to understand the need of energy audit and conservation , social and environmental cause as per Energy conservation Act.
2. Students will able to know the methodology of energy audit for industries and priority of action plan.
3. Students will able to understand the financial analysis for energy audit like payback period.
4. Students will able to understand scope demand side management, energy efficient motor and energy conservation in motors, lighting, furnace and refrigeration.
5. Students will be able to use the energy audit methods learnt to identify the areas deserving tighter control to save energy expenditure.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Understand facts, concepts, principles of energy management and conservation in view of social and environmental cause.	L2	Understand
CO2	Apply basic knowledge of science and mathematics and engineering in energy conservation and financial.	L3	Apply
CO3	Apply Knowledge of electrical subjects for demand side management for sustainable economic deployments, social and environmental issues as life long practices	L3	Apply
CO4	Analyze the characteristics, process of operation in manufacturing, agricultural and transportation sectors to arrive fruitful suggestions for possible energy conservation.	L4	Analyze
CO5	Apply the basic principles and methodologies adopted in energy audit of any utility.	L3	Apply

Energy Audit and Management (PEEE6061T)

Course Contents

Unit-I

08 Hrs.

Energy Management: Concept of energy management -energy inputs in industrial, residential, commercial, and agricultural and public sector management of power factor, power factor improvement, power demand monitoring. Concept of demand side management (DSM), scope of DSM, DSM planning and implementation ,load management as DSM strategy Advantages of DSM to consumers, utility and society.

Unit-II

08 Hrs.

Economics of Energy Conservation: Simple payback period analysis, advantages and limitations of payback period, time value of money, net present value method and internal rate of return method, Risk and sensitivity analysis, Financing options, Micro factors and macro factor Study and selection of proper tariff for particular application, fixed and variable components in tariff, impact of tariff on energy management.

Unit-III

08 Hrs.

Energy Conservation : Transformer Testing: Motive power: potential for saving electrical energy in motors - over sizing or under loading, improving efficiency of an existing motor, energy efficient motors, use of variable or adjustable speed drives for energy conservation, effect of rewinding on performance and consumption. Lighting: level of illumination for different areas. Use of right source of lamp for different applications, energy efficient lamps, type of light fixtures. Heating and Cooling systems: energy saving in furnace, air conditioners and refrigeration.

Unit-IV

09 Hrs.

Scope of Conservation : 1. Energy conservation in industrial, agricultural, commercial, domestic and municipal sectors. 2. Energy conservation in generation, Co-generation, Waste heat recovery 3. Energy conservation in transmission and distribution

Unit-V

09 Hrs.

Energy Audit : Need and concept of energy audit, pre-requisite of energy conservation, principles of energy audit, type and methodology of energy audit: preliminary energy audit and detailed energy audit, procedures of carrying out energy audit. Identification of energy conservation opportunities and priority, energy audit report writing, Instruments used for energy audit. Energy Conservation Act, Progress made in energy conservation in India.

2. S. Rao, "Energy Technology"" Khanna Publishers, 2010.
3. B. E. Kushare, "Hand Book on Energy Efficient Motors" , International Cooper Proposition Council.

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
Industrial Automation and Control (PEEE6052T)		

Prerequisites: Transducers, Control System, Digital Electronics.

Course Objectives

1. To understand the automation process and its level.
2. To understand the advance control systems.
3. To apply the ladder logic for the PLC programming.
4. To understand and apply PLC for automation of industrial processes.
5. To understand the SCADA system.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Apply the concept of automation, its terminology, and basic communication protocols.	L3	Apply
CO2	Analyze special control structures.	L4	Analyze
CO3	Learn about PLC, their operation, and functional applications in automation.	L2	Understand
CO4	Apply knowledge of PLC for automation in industrial applications.	L3	Apply
CO5	Explain the role of actuators and SCADA systems in industrial automation.	L2	Understand

Industrial Automation and Control (PEEE6052T)

Course Contents

Unit-I

08 Hrs.

Introduction to Industrial Automation and Control : Architecture of Industrial Automation Systems, Role of automation Industry, Product life cycle, types of production system, types of automation system, Introduction to sensors and measurement systems. Overview of sensors used in automation industry.

Unit-II

08 Hrs.

Process Control: Introduction to Process Control: Proportional, Integral, Derivative, Proportional-Derivative, Proportional-Integral, and Proportional Integral Derivative Controller, Controller Tuning. Implementation of PID Controllers. Special Control Structures: Feed forward and Ratio Control. Predictive Control, Control of Systems with Inverse Response, Cascade Control, Overriding Control, Selective Control, Split Range Control

Unit-III

08 Hrs.

Programmable Logic Controllers : Ladder diagram examples, interlocking, latching, inter dependency and logical functions, PLC Timer and Counter functions on-delay timer, off-delay timers, retentive on-delay timers, pulse timers, timer examples, up-counter, down-counter and up-down counter, counter examples, register basics.

Unit-IV

09 Hrs.

PLC Programming : Ladder diagram, STL, functional block diagram, creating ladder diagram from process control descriptions, introduction to IEC61131 international standard for PLC, Case study of PLC in different industry.

Unit-V

09 Hrs.

Introduction to Actuators and SCADA : Electrical Actuators: Solenoids, Relays and Contactors, AC Motor, energy conservation schemes through VFD, DC Motors, Servo Motor, Pneumatic and hydraulic actuators. Hydraulic Actuators: Flow Control Valves. Hydraulic Actuator Systems, Principles, Components and Symbols, Hydraulic Actuator Systems: Pumps and Motors, Proportional and Servo Valves. Introduction to SCADA: Elements of SCADA, Features of SCADA, MTU, RTU Functions, Applications of SCADA, Communications in SCADA,

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
Electrical Mobility (PEEE6053T)		

Prerequisite: Electrical Measurement, Signal and System.

Course Objective

1. To make students understand the need and importance of Electric and Hybrid Electric vehicles.
2. To differentiate and analyze the various energy storage devices.
3. To impart the knowledge about architecture and performance of Electric and Hybrid Vehicles.
4. To study the different Charging standards used for electric vehicles.
5. To classify the different drives and controls used in electric vehicles.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Analyze the concepts of hybrid and electric vehicles.	L4	Analyze
CO2	Describe the different types of energy storage systems and battery charging systems.	L2	Understand
CO3	Classify the different modes of operation for hybrid vehicles.	L4	Analyze
CO4	Apply the different charging standards used for electric vehicles.	L3	Apply
CO5	Differentiate between Vehicle-to-Home and Vehicle-to-Grid concepts.	L4	Analyze

Electrical Mobility (PEEE6053T)

Course Contents

Unit-I

08 Hrs.

Introduction to Hybrid and Electric Vehicles: Need and importance of Electric Vehicle and Hybrid Electric Vehicles, Environmental importance of Hybrid and Electric vehicles. Hybrid Electric vehicles: Concept and architecture of HEV drive train (Series, parallel and series-parallel). Micro Hybrid, Mild Hybrid, Full Hybrid, Plug-in Hybrid, Electric vehicles: Components, configuration, performance, tractive effort, Advantages and challenges in EV.

Unit-II

09 Hrs.

Energy Storage Systems and Battery Management Systems: Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery specifications, Battery based energy storage and its analysis, Classification of lithium ion batteries, Aluminum Air and Aluminum ion battery. Fuel Cell based energy storage, Super Capacitor based energy storage.

Battery Management Systems: Introduction: Different Charging algorithms and Charging method, Cell Balancing methods. Battery Management System: Functions of BMS, Block diagram of BMS, SoC Estimation methods, Thermal Management of Battery

Unit-III

08 Hrs.

Hybrid Power Train and Mode of Operation: Control Strategies and Design of the Major Components: Series and Parallel Hybrid Electric Drive Train. Energy Consumption in Braking, Braking Power and Energy on Front and Rear Wheels, Brake System of EVs and HEVs, Regenerative braking.

Unit-IV

08 Hrs.

Drives and Charging Infrastructure: Selection of drives for Electric vehicle: PMSM drive and BLDC drive, Sizing of motor, Charging Levels: 01, 02 and 03, Charging Standards: CCS, CHAdeMO, SAE J1772, IEC 60309, Bharat DC 001, Bharat AC 001, Electric Vehicle Supply Equipment (EVSE).

Unit-V

09 Hrs.

Vehicle to Home, Vehicle to Vehicle and Vehicle to Grid: Introduction, applications, V2H with demand response, Case Study of V2H.

Vehicle to Grid: Introduction of V2G, V2G infrastructure in the smart grid, Role of aggregator for V2G, Case study of V2G.

Vehicle to Vehicle: Introduction of V2V, Concept and structure

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
Project Stage-I (PJEE6060L)		

Course Objectives

1. To implement the solution as per the problem statement.
2. To develop the team building, writing, logical reasoning and management skills.
3. To provide the connections between the designs and concepts across different disciplinary boundaries.
4. To encourage students to become independent personnel, critical thinkers and lifelong learners.

Course Outcomes:

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Analyze the problem statement and produce solution of the problem considering cultural, social, environmental and economic factors using appropriate tool and method.	L4	Analyze
CO2	Interpret project based learning that allows students to transfer existing ideas into new applications.	L2	Understand
CO3	Apply the ability to work in teams and manage to conduct the project development activity.	L3	Apply
CO4	Use different perspectives from relevant disciplines which help them to get internships, jobs, and admission for higher studies.	L3	Apply
CO5	Explain the project development in the form of technical writing, and interpret what constitutes plagiarism and the use of proper referencing styles.	L2	Understand

Project Stage-I (RCP23IPEL601)

Course Contents

Syllabus:

Domain knowledge (any beyond) needed from the following areas for the effective implementation of the project: Electrical Machines, Power System Analysis, Electromagnetic Engineering, Utilization of Electrical Energy, Industrial Automation Control and Digital Signal Processing, Internet of Things, Machine Learning, Python Programming.

The above areas can be updated based on the technological innovations and development needed for specific project.

Guidelines:

The main purpose of this activity is to improve the students' technical skills, communication skills by integrating writing, presentation and teamwork opportunities.

- Each group will be reviewed twice in a semester and marks will be allotted based on the various points mentioned in the evaluation scheme.
- In the first review of this semester, each group is expected to complete 30 percent of project.
- In the second review of this semester, each group is expected to complete 50 percent of project.
- The students may use this opportunity to learn different computational techniques towards development of a product.
- Interaction with alumni mentor will also be appreciated for the improvement of project.

Assessment Criteria:

- At the end of the semester, after confirmation by the project guide, each project group will submit project completion report in prescribed format for assessment to the departmental committee (including project guide).
- Assessment of the project (at the end of the semester) will be done by the departmental committee (including project guide).
- Oral examination should be conducted by Internal and External examiners. Students have to give presentation and demonstration based on their project.

Prescribed Project Report Guidelines:

Size of report shall be of minimum 25 pages. Project Report should include appropriate content for:

- Introduction
- Literature Survey

- Related Theory
- Implementation details
- Project Outcomes
- Conclusion
- References

Assessment criteria for the departmental committee (including project guide) for Continuous Assessment:

Assessment criteria for the departmental committee (including project guide) for End Semester Exam:

Each review consists of 25 marks. Average of the marks scored in both the two reviews will be considered for final grading. The final certification and acceptance of TW ensures the satisfactory performance on the below mentioned aspects.

Each group will be reviewed twice in a semester by faculty guide and faculty coordinator based on the following criteria:

- Project progress
- Documentation/Technical paper writing
- Key findings
- Validation of results
- Product Development

Table 1: Log Book Format

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
PLC Simulation Laboratory(PEEE6070L)		

Prerequisite: Transducers, Control System, Digital Electronics

Course Objective

1. To understand the use of PLC automation in industry.
2. To understand the ladder logic in PLC programming.
3. To apply the knowledge of ladder programming for timer based application.
4. To apply the knowledge of ladder programming for counter based application.
5. To apply and design the basic electrical industrial application using PLC.

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Understand the ladder logic of implementation.	L2	Understand
CO2	Develop ladder programming for arithmetic and logic operations.	L6	Create
CO3	Develop ladder programming for timer-based operations.	L6	Create
CO4	Develop ladder programming for counter-based operations.	L6	Create
CO5	Design ladder logic for electrical-based applications.	L6	Create

PLC Simulation Laboratory(PEEE6070L)

Course Contents

Unit-I

04 Hrs.

PLC Operations: Basic Ladder logic, logic functions (AND, OR, NOT, NAND, and NOR functions), electrical wiring diagram, scan cycle. Converting Relay schematics and Boolean equation into PLC Ladder Programs, Writing a ladder logic program directly from a narrative description.

Unit-II

10 Hrs.

PLC Ladder Programming: Programming languages for PLC, PLC module addressing, registers basics, basic relay instructions, timer-counter instructions, arithmetic functions, comparison functions, data handling, and data move functions, input-output instructions, sequencer instructions, Case studies.

List of Laboratory Experiments

Suggested Experiments: (Any 8)

1. Introduction to ladder programming.
2. Implementation Logic Gates .
3. Implementation of Light ON/OFF control.
4. Object detection and controlling conveyor motor using ladder programming .
5. Implementation Of DOL Starter.
6. Implementation Of On-Delay Timer.
7. Implementation Of Off-Delay Timer.
8. Implementation Of Up-Down Counter.
9. Logic implementation for traffic Control Application .
10. Logic implementation for Bottle Filling Application.
11. Design a PLC program to control the liquid level in a tank.
12. Write the PLC programming for continues box filling operation that requires boxes moving on a conveyor to be automatically positioned and filled.

Design based Problems / Open Ended Problem:

- Speed measurement using counter
- DC motor control in both direction
- Level controller of underground and overhand tank.
- Servo motor control
- Automatic Stamping machine
- Automatic Drilling machine
- Automatic painting machine
- Four-way traffic light control
- Control of robotic arm

Program: Electrical Engineering	T. Y. B. Tech.	Semester: VI
Environmental Engineering (MCEE6080T)		

Prerequisites: Knowledge of basic sciences.

Course Objectives

1. Understand environmental issues such as depleting resources, pollution, ecological problems and the renewable energy scenario.
2. Familiarize environment related legislation

Course Outcomes

COs	Course Outcomes	Blooms Level	Blooms Description
CO1	Explain how human activities affect the environment.	L2	Understand
CO2	Explain how human activities affect the environment.	L2	Understand

Environmental Engineering (MCEE6080T)

Course Contents

Unit-I

04 Hrs.

Social Issues and Environment: Ecological footprint and Carrying Capacity, Depleting nature of Environmental resources such as soil, water minerals and forests ,Carbon emissions and Global Warming.

Unit-II

04 Hrs.

Directive Principles of State Policy : Technological growth for Sustainable Development: Social, Economic and Environmental aspects of Sustainable Development, Renewable Energy Harvesting ,Concept of Carbon credit, Green Building ,Power and functions of Central Pollution Control Board and State Pollution Control Board.

Unit-III

05 Hrs.

Environmental impact due to technology: Environmental impact due to technology: Impact of Energy on Environment, Flow of Energy in Ecological system, Environment Degradation due to Energy, Control of pollution from Energy, Consumerelectronics, power saving devices, energy from waste, energy use and conservation.
